

MCP SERVER

NO CODE

CLOUD HOSTED

GoHighLevel Alternative MCP

Control your CRM data through conversation.

GoHighLevel Alternative MCP gives your AI agent full control over your marketing and sales data. Instead of clicking through dashboards, you talk to your CRM about contacts, open opportunities, and daily tasks. Quickly list contacts, audit sales funnels, track appointments, and manage user access all from any AI client.

The infrastructure that powers AI agents in the real world.

Vinkius connects AI to the world's software through secure, enterprise-grade infrastructure — enabling real-world execution at scale, built on the Model Context Protocol (MCP).

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the cloud infrastructure where AI agents connect to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

GoHighLevel MCP

0 tools available

Cloud-hosted on Vinkius

Your agent handles complex CRM work for you. You connect this MCP, and suddenly managing a large marketing or sales operation feels like having an expert assistant sitting next to you. Your AI client reads your GoHighLevel data—listing contacts, checking open opportunities, updating tasks—all through natural conversation. You don't need to know where the buttons are; you just tell your agent what you need done. This ability to talk directly to your sales pipeline and contact records is huge for any agency or business owner. When you connect this MCP via Vinkius, your AI client becomes a real-time operator that keeps your lead nurturing consistent and your data always accurate.

Core Capabilities

01 — Review contacts

List, check, create, or update profiles for every contact in the system.

02 — Check sales opportunities

Query specific pipelines and audit the status of active sales deals to track revenue flow.

03 — Track appointments and tasks

Monitor pending daily work items and scheduled meetings for any lead or user.

04 — Manage system users

List all user accounts within the location to maintain organizational oversight.

05 — Audit location metadata

Retrieve high-level account details and status information for quick auditing.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/mcp/gohighlevel-alternative — connect your AI agent in three steps.

- 01 Subscribe to this MCP on Vinkius and enter your GoHighLevel Location API Key.
- 02 Connect your preferred AI client (like Cursor or Claude) to the newly configured service.
- 03 Ask your agent a question—for example, 'What tasks are due for John Doe?'—and it retrieves the answer instantly.

The bottom line is you get conversational access to data that usually requires logging into multiple dashboards and clicking through complex menus.

Built For

This MCP is built for operations leaders who spend too much time jumping between tabs and systems. If your job involves making sure every lead gets the right follow-up, you need this. It's for people tired of manually auditing dashboards at 2 AM.

Account Executive

Verifies that new contacts are correctly entered and assigned to the proper sales pipeline without leaving their chat window.

Sales Manager

Monitors overall lead flow and checks opportunity statuses by asking conversational questions about the entire funnel.

Marketing Coordinator

Performs rapid audits of large contact lists or tracks task completion for campaigns, bypassing manual dashboard logins.

What Changes When You Connect

- 01 Stop clicking dashboards to check contacts. You can simply ask your agent, 'List the last 5 contacts added,' and get the answer instantly.

-
- 02 Keep your pipeline healthy by using `audit_opportunities` to track exactly where every sales deal stands without opening a single funnel report.

 - 03 Never lose track of a lead again. Use `manage_tasks` to check all pending follow-ups for any contact ID, guaranteeing nothing falls through the cracks.

 - 04 Need visibility? With `get_location_metadata`, you can quickly audit your account's overall status in real time—no searching necessary.

 - 05 User oversight is simple. `list_users` provides a quick roster of who has access to the location, helping maintain clean organizational control.
-

Real-World Applications

Auditing an agency's lead status before a meeting

The Ops Lead needs to know if five high-value leads have pending tasks or are stuck in the 'Proposal Sent' stage. Instead of logging into the CRM, they ask their agent: 'Show me all opportunities that haven't been updated this week.' The agent runs `audit_opportunities` and provides a summary list.

Checking follow-up requirements after a major sale

A Sales Manager just closed a big deal but needs to confirm the next steps. They ask: 'What tasks are assigned to this client?' The agent uses `manage_tasks` and reports back two specific actions, ensuring the handoff is perfect.

Onboarding a new Account Executive

A new AE needs to verify if the company has created profiles for key prospects. They use their agent client to run `list_contacts`, pulling up confirmation that all target accounts are ready and correctly formatted.

Preparing for an audit of company access

The Agency Owner needs a list of every user who can access the system. They use their agent to run `list_users`, getting a clean roster immediately without navigating through settings menus.

Patterns to Avoid

Trying to manually update records

X AVOID

A coordinator has 20 contacts that need an address field updated. They open the CRM, click on each record individually, and copy-paste the new data point 20 times.

✓ INSTEAD

Don't do it that way. Tell your agent to run `list_contacts` for the target group, then ask the agent to update the required fields across all records in bulk.

Forgetting where crucial tasks are logged

X AVOID

A team member can't recall if they sent a follow-up call or proposal last week. They waste 15 minutes digging through notes and activity logs, hoping to find the confirmation.

✓ INSTEAD

Just ask your agent: 'What tasks are assigned to this contact ID?' The agent uses `manage_tasks` to provide an immediate status update.

Confusing roles with capabilities

X AVOID

A user tries to treat the CRM like a general document database, asking it for unstructured notes or emails that aren't linked to a contact record.

✓ INSTEAD

This MCP handles structured data. Stick to core functions: `list_contacts`, `audit_opportunities`, and `manage_tasks`.

The Right Fit

Use this MCP if your job requires constant access to specific CRM data points—like knowing which deals are open or who needs a follow-up call today. If you spend more time clicking through dashboards than doing actual sales work, this is for you.

Don't use it if you need general document storage, email drafting, or complex external integrations that aren't tied to contact records. For those tasks, you'll need a different type of agent tool. This MCP focuses on structured data management: contacts, opportunities, and tasks. It is your single source of truth for the operational status of your business.

The pain of jumping between tabs to manage leads.

Right now, managing a sales pipeline means opening the CRM dashboard, clicking over to the 'Opportunities' tab to see deal value, then switching again to the 'Contacts' list to check if John Doe was properly assigned. You spend more time navigating the platform than actually selling.

With this MCP connected through Vinkius, you talk to your agent like it's a person. You ask for an update on opportunities and contacts simultaneously. The agent gathers all that information in one response, giving you immediate clarity without ever making you click a tab.

Get instant oversight of leads with the GoHighLevel Alternative MCP.

The manual steps like cross-referencing task lists against contact profiles or running location audits take minutes and require multiple logins. You have to confirm who has access (`list_users`) before you can even check if a lead is ready.

Now, the agent handles this coordination instantly. It checks tasks, verifies contacts, and reviews opportunities—all in one conversational sweep. The process moves from tedious manual clicks to a single, direct question.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U List the last 5 contacts added to GHL.

I've retrieved your recent contacts. You have 5 new entries, including 'John Doe' and 'Jane Smith'. Would you like the full details for any of them?

U Show me my open sales opportunities.

I've found 3 open opportunities in your pipeline: 'New Software Deal', 'Consulting Package', and 'Q4 License'. I can provide the estimated value for each if you like.

U What tasks are assigned to contact ID 12345?

Checking tasks for that contact... I've found 2 pending tasks: 'Follow up call' and 'Send proposal'. Both are currently due this week.

Frequently Asked Questions

01 Does GoHighLevel Alternative MCP help me with general marketing writing?

No. This MCP is strictly for managing structured CRM data like contacts, tasks, and opportunities. It doesn't write content or manage email campaigns; it just gives you the data to do that elsewhere.

02 How fast can I check sales opportunities using GoHighLevel Alternative MCP?

You get near-instant responses because your agent queries the live platform directly. Instead of waiting for a manual report, you ask `audit_opportunities` and get the current status immediately.

03 Can I use this MCP to manage contacts from multiple sources?

This MCP reads data that is already housed within your connected GoHighLevel location. It doesn't pull information from external, unconnected databases; it acts as an internal query tool.

04 Is list_contacts the only way to get contact details?

No. You can also use manage_tasks to find out what actions are assigned to a specific contact ID, which helps provide context beyond just their basic profile details.
