

MCP SERVER

NO CODE

CLOUD HOSTED

Gumroad MCP

Manage sales, codes, and products conversationally.

Gumroad MCP lets you use natural conversation to run your entire e-commerce business. List products, track sales history across date ranges, manage subscriber lists, and automate discount codes—all without leaving your chat window.

The infrastructure that powers AI agents in the real world.

Vinkius connects AI to the world's software through secure, enterprise-grade infrastructure — enabling real-world execution at scale, built on the Model Context Protocol (MCP).

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the cloud infrastructure where AI agents connect to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Gumroad MCP

8 tools available

Cloud-hosted on Vinkius

You can connect Gumroad directly to any AI client and treat it like a dedicated store manager. Need to know how much you sold last month? Ask. Want to create a 20% code for a new campaign? Command it. The MCP gives your agent full control over product listings, transaction history, and customer data.

This lets you move beyond just viewing dashboards. You can list all products, retrieve detailed metadata, and even get the complete sale details for a specific ID to handle customer support instantly. When connected via Vinkius, your AI client becomes the central command point for everything related to your digital goods business. It's about controlling every aspect of the checkout flow using plain language.

No more jumping between tabs or manually filtering data; you simply ask your agent what you need, and it handles the complex API calls.

Core Capabilities

01 — Review Product Inventory

List all digital products and retrieve their pricing, URLs, and metadata.

03 — Manage Discounts

Create, list, or manage fixed or percentage-based discount codes for marketing campaigns.

05 — Monitor Audience Growth

List all product subscribers or retrieve general account profile information.

02 — Analyze Sales Performance

Check transaction history using date filters to track revenue trends and identify best-selling items.

04 — Handle Customer Support Data

Retrieve full transaction details using a sale ID to verify purchases and resolve support issues quickly.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/mcp/gumroad-alternative — connect your AI agent in three steps.

- 01 Subscribe to this MCP and generate your Application Token from your Gumroad Dashboard settings.
- 02 Provide your AI client with the necessary API credentials and authorize access through Vinkius.
- 03 Use natural language prompts—for example, 'Show me all sales over \$50 last week'—and your agent executes the request.

The bottom line is you get a single conversational interface for managing complex e-commerce data that used to require multiple dashboards and API calls.

Built For

Digital creators, small business owners running online courses, or growth marketers who spend too much time manually cross-referencing sales data across platforms. You're tired of checking 12 different tabs just to figure out last quarter's revenue breakdown.

Digital Creator

Uses this MCP to generate new discount codes and monitor product performance without leaving their content creation environment.

E-commerce Manager

Checks detailed transaction records using specific sale IDs when a customer calls with a purchase discrepancy.

Growth Marketer

Tracks subscriber list growth and monitors overall sales trends across multiple products to plan the next campaign.

What Changes When You Connect

- 01 Stop manually checking spreadsheets for revenue. Your agent can use `list_sales` to pull transaction histories with date filters in seconds, giving you immediate insight into your cash flow.

-
- 02** Never forget a marketing promotion again. You can instantly create new discount codes using `create_offer_code`, letting your AI client manage the entire launch cycle from prompt to active code.
-
- 03** Handling customer support is faster than ever. Instead of digging through dashboards, you just ask for sale details and use `get_sale_details` to verify a purchase ID right in chat.
-
- 04** Stay connected with your audience by tracking growth. Use `list_product_subscribers` to get an instant list of people subscribed to any specific item.
-
- 05** Get a full view of your storefront using `list_products`. You can pull metadata and shareable URLs for everything you sell in one command.
-

Real-World Applications

Checking Quarterly Revenue Trends

A growth marketer needs to know the total sales from Q1. Instead of running reports on a separate analytics platform, they ask their agent to 'list recent sales for Q1'. The MCP uses `list_sales` to summarize the revenue and track acquisition trends.

Launching an Immediate Flash Sale

A digital creator has a sudden inventory surplus and needs an immediate discount. They prompt the agent: 'Create a 25% code named FLASH25 for my guides.' The MCP executes `create_offer_code`, making the campaign instantly ready.

Fixing a Customer's Billing Dispute

A customer claims their payment failed. An e-commerce manager asks the agent to 'check sale ID GMR12345'. The MCP uses `get_sale_details` to retrieve all transaction information, confirming whether the payment was processed or if a specific step failed.

Analyzing Product Popularity

A marketer wants to see which product is keeping people engaged. They ask, 'Show me all subscribers for my advanced template pack.' The MCP uses `list_product_subscribers` and provides a clear roster of your most dedicated users.

Patterns to Avoid

Treating it like a simple database query

✗ AVOID

You try to list all sales, but only get raw data without date filtering. You end up manually sorting through hundreds of transactions just to find the monthly totals.

✓ INSTEAD

Always use the natural language capability to tell your agent exactly what time frame you need. Ask for 'list recent sales from last month.' This uses `list_sales` and handles the filtering automatically.

Asking generic questions about money

✗ AVOID

You ask, 'How much revenue did I make?' The agent might give a vague answer because it doesn't know if you mean today, this month, or last year.

✓ INSTEAD

Be specific. Use date ranges and tool names when necessary. Ask for 'list sales between October 1st and November 30th.' This ensures `list_sales` pulls the exact data set you need.

Ignoring product details

✗ AVOID

You just see a sale ID but don't know what was actually sold or at what price. You waste time clicking back to your product list.

✓ INSTEAD

When reviewing sales, always follow up by asking the agent to 'get product details for this item.' This uses `get_product_details` and gives you immediate context on the item's pricing.

The Right Fit

Use this MCP if your e-commerce workflow involves managing multiple discrete data points: tracking sales over time, creating variable discount codes, or handling per-customer support requests. If you need to know *what* was sold, *when*, and *to whom*, this is the tool. Don't use it if all you want is a simple list of products; then just using `list_products` is enough. But if you need that list combined with its metadata, or if you plan on writing code based on sales data, this MCP gives your agent the full context needed to act as a true operational layer over Gumroad.

The pain of managing e-commerce through separate tabs and dashboards is exhausting.

Today, checking on your digital product sales means opening Gumroad, navigating the 'Analytics' tab, filtering by date range, then maybe hopping over to a different window just to see who subscribed. You copy data from one place, paste it into another for totals, and you spend more time managing the data than actually selling stuff.

With this MCP, your agent handles all that complexity in plain English conversation. Instead of clicking through four tabs to get sales figures, product names, and subscriber counts, you just ask your agent what you need, and it synthesizes a full report for you.

You finally gain conversational control over the Gumroad platform.

The manual steps that vanish include navigating to 'Create Offer Code,' manually setting the discount percentage, and then having to go back to your product listing just to confirm which item it applies to. It's a tedious loop of confirmation clicks.

Now you can tell your agent: 'Generate a 20% code for my advanced guide.' The MCP uses `create_offer_code` instantly, handling the entire workflow from concept to active discount without you lifting a finger.

Gumroad MCP: 8 Tools for E-commerce Management

These tools let you programmatically interact with Gumroad's core functions, letting your AI client perform specific tasks like listing sales or creating discount codes.

#	TOOL	DESCRIPTION
01	<code>create_offer_code</code>	Generates a new discount code for your store.
02	<code>get_product_details</code>	Retrieves specific pricing and metadata for any product you list.
03	<code>get_sale_details</code>	Pulls every detail about a single, specific transaction ID.
04	<code>get_user_profile</code>	Retrieves high-level details about your overall Gumroad account setup.
05	<code>list_offer_codes</code>	Shows you all discount codes currently active for a product.
06	<code>list_products</code>	Lists every digital product associated with your account.
07	<code>list_sales</code>	Generates a list of recent sales, allowing you to filter by date range.
08	<code>list_product_subscribers</code>	Retrieves the names and details of people subscribed to one specific product.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U List all my products on Gumroad.

I've retrieved your digital products. You have 5 active items, including 'Advanced AI Guide' (\$49.00) and 'MCP Templates' (\$19.00). Would you like the shareable URLs for any of these?

U Show me the sales from the last 7 days.

Scanning transaction history... In the last 7 days, you've had 12 sales totaling \$345.00. The best-selling product was 'MCP Templates'. Would you like a breakdown of each transaction?

U Create a 20% discount code named 'SUMMER26' for my AI Guide product.

Done! I've created the offer code 'SUMMER26' for your 'Advanced AI Guide'. It provides a 20% discount and is ready for use on your checkout page.

Frequently Asked Questions

01 How do I use the Gumroad MCP to check sales?

You ask your agent to list recent sales and provide date filters. The MCP uses `list_sales` to pull the transaction data, allowing you to track revenue trends over specific periods.

02 Can I create a discount code using Gumroad MCP?

Yes, simply ask your agent to generate one. It executes the `create_offer_code` tool, which handles setting up both fixed and percentage-based discounts for your products.

03 What data does `get_sale_details` provide?

This tool retrieves all high-fidelity details about a single sale ID. You can use this to verify purchases or troubleshoot customer support issues by getting the full transaction record.

04 Does `list_products` give me everything I need?

It gives you a complete listing of all products, including their metadata and shareable URLs. If you want specific details on one item's price point, use `get_product_details`.

05 How do I check who subscribed to my course?

You prompt your agent to list product subscribers. The MCP runs the `list_product_subscribers` tool, giving you an instant roster of everyone connected to that specific item.
