Housewarming Party Planner MCP

Handle your event logistics through your AI client.

Housewarming Party Planner MCP handles the heavy lifting of event coordination. It gives your AI client the ability to track guest lists, calculate food and drink needs, monitor your spending, and check if your home is actually ready for visitors.

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Housewarming Party Planner MCP

4 tools available

Cloud-hosted on Vinkius

Planning a housewarming shouldn't feel like a second job. This MCP turns your AI client into a dedicated event coordinator that keeps track of the moving parts. Instead of jumping between spreadsheets and notes, you can just ask your agent to check your budget or see if you have enough seating for everyone. It manages the logistical pillars of your celebration, from dietary restrictions to catering math. You can use it to keep your spending in check or to verify that your cleaning tasks are finished before the first guest arrives. It's a central hub for domestic hosting that keeps your planning organized and your stress levels low.

Core Capabilities

01 — Guest Management

Your agent uses this to track who is coming and what they can or cannot eat.

02 — Catering Estimates

The AI calculates food and drink quantities based on your guest count.

03 — Budget Monitoring

Your agent tracks expenses against your set limit to prevent overspending.

04 — Home Readiness Checks

The AI verifies if you have enough seating and if cleaning is done.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/housewarming-party-planner — connect your AI agent in three steps.

- 01 Connect the MCP to Claude, Cursor, or Windsurf via Vinkius.
- 02 Tell your AI client you are planning a housewarming.
- 03 Ask the agent to perform specific tasks like calculating food or checking budgets.
- 04 The agent uses the MCP tools to provide real-time updates and data.

Connect the MCP to your preferred client and start asking questions.

Built For

This is for anyone hosting a housewarming who wants to offload the mental math and organization to an AI.

Homeowners

They hand off the tracking of budgets and guest dietary needs to the AI.

Event Hosts

They use the AI to manage catering math and seating logistics.

What Changes When You Connect

- 01 Centralizes guest, food, and budget data in one place.
- 02 Prevents overspending by tracking every expense.
- 03 Reduces catering errors by calculating quantities automatically.

04 Ensures your home is prepared for the guest count.

Real-World Applications

Budget Tracking

Ask your agent how much money you have left after buying groceries.

Dietary Management

Check the guest list to ensure you have enough vegetarian options.

Catering Math

Get a quick estimate of how many drinks to buy for a specific number of people.

Final Prep

Use the readiness tool to confirm you have enough chairs for your guests.

Patterns to Avoid

Manual math errors

❌ AVOID

You try to guess how many bottles of wine to buy by looking at your guest list and eyeballing it.

✓ INSTEAD

Let the agent do the heavy lifting. Use ``calculate_catering_needs`` to get an accurate estimate based on your actual guest count.

Budget creep

❌ AVOID

You keep buying decorations and snacks without checking if you've already hit your spending limit.

✓ INSTEAD

Keep your spending on track by using ``track_budget`` to see exactly how much money you have left.

Forgotten dietary needs

❌ AVOID

You realize halfway through the party that you forgot to account for a guest with a severe allergy.

✓ INSTEAD

Stay ahead of food safety by calling ``get_guest_list`` to review all dietary requirements before you shop.

The Right Fit

Connect this MCP if you are hosting a housewarming and want to offload the mental math of catering and budgeting. Do not use this if you are managing a professional corporate event or a large-scale wedding. The decision depends on whether you want an AI to handle domestic hosting logistics.

Housewarming Party Planner MCP Tools

A suite of tools designed to handle the logistics, math, and checklists for hosting guests at home.

#	TOOL	DESCRIPTION
01	check_home_readiness	This tool checks if your house is ready for guests and if you have enough seating.
02	track_budget	Use this to monitor your total spending and remaining funds.
03	calculate_catering_needs	This tool estimates how much food and drink you need to buy.
04	get_guest_list	This tool retrieves your list of attendees and their specific dietary requirements.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

Who is coming to the party?

The current guest list includes Alice (accepted, vegetarian), Bob (pending), and Charlie (accepted, nut allergy).

How much food should I buy for 15 guests?

For 15 guests, you should prepare 15 appetizers, 15 mains, and 15 desserts, along with sufficient alcoholic and non-alcoholic beverages.

How much of my \$500 budget is left?

You have spent \$350 so far, leaving you with \$150 remaining in your budget.

Frequently Asked Questions

01 How do I use this MCP?

You connect it to an MCP-compatible client like Claude or Cursor through Vinkius. Once connected, you simply talk to your AI agent about your party plans.

02 Can I track my spending?

Yes, the track_budget tool allows your agent to monitor your expenses and tell you how much of your budget remains.

03 Will it help with dietary restrictions?

Yes, the `get_guest_list` tool tracks attendee requirements so you can plan for allergies or specific diets.

04 Does it calculate food amounts?

Yes, the `calculate_catering_needs` tool provides estimates for food and drinks based on your guest count.

05 What clients work with this MCP?

This MCP works with any compatible client, including Claude, Cursor, and Windsurf.

06 How do I know if I have enough food for my guests?

You can use the `'calculate_catering_needs'` tool by providing the number of guests to receive specific estimates for food and drinks.

07 Can I track dietary restrictions?

Yes, the `'get_guest_list'` tool provides a list of guests including their specific dietary requirements.

08 How do I check if my house is ready for the party?

Use the `'check_home_readiness'` tool with your seating capacity to get a readiness score and a list of pending tasks.

Go Live in 60 Seconds

Get your connection token from cloud.vinkius.com, then paste the endpoint URL into any MCP-compatible client.

YOUR MCP ENDPOINT
