

MCP SERVER

NO CODE

CLOUD HOSTED

LexisNexis MCP

Automate deep corporate and legal intelligence gathering.

LexisNexis provides instant access to global corporate intelligence, legal records, and news monitoring via an AI-powered MCP connection. Your agent can conduct deep due diligence, pull full company dossiers, track brand mentions across thousands of news sources, and summarize complex legal cases—all through natural conversation.

risk-management

The infrastructure that powers AI agents in the real world.

Vinkius connects AI to the world's software through secure, enterprise-grade infrastructure — enabling real-world execution at scale, built on the Model Context Protocol (MCP).

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the cloud infrastructure where AI agents connect to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

LexisNexis MCP

7 tools available

Cloud-hosted on Vinkius

LexisNexis lets your agent handle massive corporate intelligence research without you ever having to navigate a complicated database interface. Instead of spending hours copying data between tabs, you simply ask for it. Your AI client searches global news archives for brand mentions or competitive activity in real time. You can instantly pull comprehensive company dossiers to map out an organization's structure and history. Need legal context? Your agent retrieves summaries and full details for specific case IDs. This capability transforms painstaking background checks and media audits into a simple conversation. By connecting this MCP through Vinkius, you get immediate access to the world's leading repository of authoritative data, making your business decisions grounded in verified facts.

Core Capabilities

01 — Conducting corporate audits

Search for companies by name and retrieve detailed dossiers that map out organizational structures and histories.

03 — Monitoring global news mentions

Search across thousands of international news sources to monitor industry trends or brand name visibility in real time.

02 — Tracking legal disputes

Query legal case summaries and pull full details about specific litigation research topics.

04 — Building professional profiles

Find and analyze professional biographies to understand the backgrounds of key people in an industry.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/mcp/lexisnexis — connect your AI agent in three steps.

- 01 Subscribe to this MCP, providing your LexisNexis Client ID and Client Secret.
- 02 Connect your preferred AI client (Claude, Cursor, etc.) via the Vinkius Marketplace.
- 03 Use natural language prompts with your agent—for example, asking it to 'search for global news on offshore wind developments'—to retrieve actionable intelligence.

The bottom line is you get a real-time research analyst that speaks the language of AI agents and pulls data from specialized corporate databases.

Built For

This MCP is for professionals who deal with high stakes, complex information, and regulatory requirements. If your job involves due diligence, legal background checks, or competitive analysis, you need this.

Legal Researcher

You use it to query full case details and search for summaries related to specific areas of law, keeping track of litigation research without manual searching.

Risk Manager

You perform rapid audits by using your agent to check corporate backgrounds and monitor negative or positive media mentions across global news sources.

Business Analyst

You search for companies by name, pull detailed dossiers, and cross-reference those findings with professional biographies to validate market assumptions.

What Changes When You Connect

- 01 Avoid manual data retrieval. Instead of copy-pasting findings from multiple sources, your agent collects everything—from `search_news` results to company dossiers—and presents it in one summary.

-
- 02 Perform instant risk assessments. You can run a rapid audit by combining a corporate search (`search_companies`) with news monitoring (`search_news`) to see immediate red flags or positive coverage.

 - 03 Go beyond basic searches. If you need full legal context, simply use the `get_case_details` tool to pull the entire record for a specific case ID, not just a summary.

 - 04 Streamline background checks. Combining `search_companies` with the ability to find professional biographies means you get both corporate structure and key personnel insight in one flow.

 - 05 Access specialized knowledge bases. If your research hits a dead end, use `list_sources` to see every available data repository before starting over.
-

Real-World Applications

Vetting a potential acquisition target

A business analyst needs to know if Target Corp is stable. They ask the agent to `search_companies` for the dossier, then use `search_news` to check the last six months of mentions, and finally run `search_legal_cases` to flag any recent litigation. The agent returns a consolidated risk report.

Assessing key personnel risk

A recruiter is vetting a candidate. They use the agent to `search_biographies` for the person's professional history, and then cross-reference those details with any negative press found via `search_news`.

Pre-litigation investigation

A legal team needs context on a competitor. They use the agent to `search_legal_cases` for keywords related to patent infringement, and then use `get_case_details` on the top three results to understand precedents before filing.

Competitive market watch

A product manager needs to know how competitors are talking about a new technology. They prompt the agent to `search_news` using the industry's technical term, getting real-time reports from global sources.

Patterns to Avoid

Searching only by keyword

✗ AVOID

Running a basic search for 'environmental compliance' and receiving thousands of generic articles that don't name the company or location.

✓ INSTEAD

Instead, use ``search_companies`` to narrow the focus first, then use ``search_news`` with the specific company name. This limits noise and gives you targeted intelligence.

Assuming data coverage

✗ AVOID

Spending time building a workflow only to find out that crucial regional data isn't included in your scope.

✓ INSTEAD

Always start by using ``list_sources``. This tells you exactly what repositories are available, ensuring your entire research plan is grounded in the actual data set.

Treating all legal docs equally

✗ AVOID

Accepting a general summary of a court ruling when you need to know specific procedural details or filing history.

✓ INSTEAD

After running ``search_legal_cases``, always use the ``get_case_details`` tool. This pulls the full, unedited record necessary for deep due diligence.

The Right Fit

Use this MCP if your job requires synthesizing disparate data points—like linking a company's public profile with its legal history and recent media coverage. You need to know *why* something happened, not just that it happened. The strength of this connector is combining multiple functions: you can search for companies by name, find their professional contacts through biographies, and then check if either the company or those individuals have been mentioned in global news sources. Don't use this if you only need a single piece of information, like checking one simple fact. For that, a general API connector might suffice. But when your goal is a comprehensive intelligence report—the kind used for M&A or risk assessment—this MCP is essential because it connects the corporate profile to the legal record and the public narrative.

The Manual Grind of Corporate Due Diligence

Right now, doing proper due diligence means opening a dozen tabs: one for company profiles, another for recent news articles, a third for legal databases. You copy names from the business filing into the search bar over on the legal research site; then you have to manually cross-reference any mentions in the press against the organizational chart.

With this MCP, your agent handles that entire process. You just tell it: 'Audit Company X.' It automatically runs the company profile retrieval and sweeps through news and legal databases simultaneously. The result isn't a folder of links; it's one cohesive analysis.

LexisNexis Powers Your Research With Full Intelligence

The manual steps that go away include the initial search for company records, the time spent cross-referencing news mentions against biographical data, and the need to manually pull case summaries into a single report. The agent handles all those transitions.

You stop being an information gatherer; you become a decision maker. You get actionable intelligence immediately.

LexisNexis: 7 Tools for Deep Research

These tools let your agent execute specific research tasks: from searching professional biographies to pulling full details on a company's background.

#	TOOL	DESCRIPTION
01	<code>get_case_details</code>	Fetches the complete record and details for a specific legal case ID.
02	<code>get_company_dossier</code>	Pulls comprehensive, detailed background information about an entire company.
03	<code>list_sources</code>	Provides a list of all specialized data sources available within the LexisNexis catalog.
04	<code>search_biographies</code>	Searches for professional biographies to understand an individual's career and background.
05	<code>search_companies</code>	Initiates a search using company names to find relevant corporate records.
06	<code>search_legal_cases</code>	Searches for legal cases based on summary keywords provided by the user.
07	<code>search_news</code>	Conducts a broad search across global news sources using specific topics or keywords.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U Search for latest news about 'Renewable Energy' in LexisNexis.

I've retrieved the latest headlines. Notable reports include new solar farm developments in the UK and offshore wind updates. Would you like the full summaries for the top 5 articles?

U Show company details for 'Vinkius'.

I've found the dossier for Vinkius. They are a leader in AI research and MCP server infrastructure. Would you like to see their organizational structure or recent news mentions?

U Find legal cases related to 'Patent Infringement'.

I've identified 10 recent cases of patent infringement. Notable summaries include tech sector disputes and manufacturing litigation. Would you like the full details for a specific case ID?

Frequently Asked Questions

01 How do I search for legal cases using the LexisNexis MCP?

You use `search_legal_cases` by providing relevant summary keywords, which returns a list of potential matches. From that list, you can then select an ID and run `get_case_details` to get the full record.

02 Can I check if a company is active using LexisNexis MCP?

Yes. You should start by calling `search_companies` with the name, which provides an initial profile that indicates operational status and structure.

03 What kind of news can I get from the LexisNexis MCP?

The `search_news` tool searches thousands of global sources. You can monitor specific industry trends or check for brand mentions anywhere in the world.

04 Is there a way to find information on people using LexisNexis MCP?

You use `search_biographies` to look up professional backgrounds. This helps validate key personnel identified during your corporate research.
