

MCP SERVER

NO CODE

CLOUD HOSTED

LinkedIn Page Management MCP

Automate your company's entire social conversation.

LinkedIn Page Management MCP lets your AI client handle all company page actions: drafting posts, moderating comments, tracking reactions, and managing multiple linked organizations. It connects natural language commands directly to the LinkedIn REST API, automating community engagement and content publishing for marketing teams.

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

LinkedIn Page Management MCP

7 tools available

Cloud-hosted on Vinkius

Need to keep up with a brand's social presence without juggling multiple dashboards? This MCP lets your agent treat your company page like any other conversation. You can ask it to pull a list of all pages you manage, then tell it to draft an update and publish it right away. It's built for hands-on community care—you can retrieve comments on any post so you know exactly what people are saying, or reply officially as the brand. Want to clean up old content? You can get a history of past posts and permanently delete anything that is outdated. Because Vinkius hosts this MCP in their catalog, your agent connects once and gains immediate access to all these core social actions.

Core Capabilities

01 — Find managed pages

Identifies every LinkedIn Company Page where you have administrative rights.

02 — Publish new content

Creates and publishes text-based updates directly to your company page feed.

03 — Moderate comments

Lists all current comments on a specific post so you can review community feedback.

04 — Respond as the brand

Posts official replies and comments to guide discussions and answer questions on your page.

05 — Track engagement metrics

Retrieves the count of likes and reactions for specific posts.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/mcp/linkedin-page-management — connect your AI agent in three steps.

- 01 First, subscribe to this MCP within Vinkius and provide your LinkedIn Access Token and API Version.
- 02 Next, connect this MCP to your preferred AI client (Claude, Cursor, Windsurf, etc.).
- 03 Finally, simply tell your agent what you need done—like 'Check comments for the latest product launch post'—and it handles the rest.

The bottom line is that once configured, your agent can execute complex social media tasks using natural conversation prompts, eliminating manual API calls.

Built For

This MCP is for Social Media Managers and Content Leads who are tired of context switching between LinkedIn, a CRM, and a separate analytics dashboard. It's built for people who need to act on social feedback instantly without leaving their core productivity tools.

Social Media Manager

Uses the MCP to schedule multiple posts across different company pages and monitor real-time community discussion.

Community Lead

Routinely checks for comments on high-priority posts, responding immediately using `create_post_comment` to guide the conversation.

Marketing Developer

Integrates social publishing and engagement tracking into internal tools by calling functions like `list_managed_pages`.

What Changes When You Connect

- 01 You stop manually copying and pasting posts. By using `create_page_post`, you let your agent draft, review, and publish updates directly to the Company Page feed from a natural language prompt.

-
- 02** Community monitoring gets faster. Instead of navigating pages to check for feedback, running `list_managed_pages` shows you every page you can monitor, giving you total oversight.
-
- 03** Responding is instant. Need to reply? Use `create_post_comment` to post an official brand response right where the discussion is happening. It keeps the conversation flowing.
-
- 04** Analytics are always current. You don't have to guess about reach; calling `list_post_likes` gives you a real-time count of engagement metrics for any piece of content.
-
- 05** Content hygiene is simple. If a post is old or inaccurate, you can use `delete_page_post` to take it down immediately without logging into the LinkedIn interface.
-

Real-World Applications

Handling a product launch wave

A Community Lead wants to promote a new feature. They ask their agent to first run `list_managed_pages` to confirm all brand accounts are active, then use `create_page_post` for the initial announcement, and finally monitor replies using `list_post_comments` so they can jump in and answer questions immediately.

Addressing negative feedback

A Social Media Manager sees a post with several comments. They ask their agent to use `list_post_comments`, spot the critical thread, and then reply using `create_post_comment` to turn the negative chat into a positive one.

Cleaning up old content

A Marketing Developer notices several posts from a year ago are inaccurate. They use their agent to run `list_page_posts`, identify the outdated items, and then call `delete_page_post` for all of them in one workflow.

Tracking overall campaign success

A Content Lead runs an analysis on a major post. They use their agent to run `list_post_likes` and then ask for `list_page_posts` history to compare the engagement metrics across different campaigns.

Patterns to Avoid

Trying to manually delete posts

✗ AVOID

Logging into LinkedIn, finding a specific post, and clicking through menus to hit 'Delete'. This is slow, prone to human error, and doesn't scale.

✓ INSTEAD

Instead of manual deletion, let your agent call ``delete_page_post``. You just tell the MCP which page and which content needs removal.

Missing a page ID

✗ AVOID

If you don't know if your company has multiple pages or where to start checking, you waste time guessing the correct organizational IDs.

✓ INSTEAD

Always start by running ``list_managed_pages``. This tool gives you a definitive list of every single page you have control over.

Only posting content

✗ AVOID

Just writing and publishing posts without checking the conversation. You publish, then wait hours for people to reply, losing momentum.

✓ INSTEAD

After using ``create_page_post``, immediately follow up by running ``list_post_comments``. This lets you catch early feedback and respond quickly with ``create_post_comment``.

The Right Fit

Use this MCP if your primary bottleneck is the speed of social media execution—specifically, when you need to post, moderate conversations, or track engagement across multiple company profiles. You should use it anytime natural language prompts are required for repetitive tasks like replying to comments (`create_post_comment`) or listing all controlled accounts (`list_managed_pages`). Don't use this if you only need to pull raw data from LinkedIn and process it offline; in that case, a dedicated API connector might be better. But if the goal is *action*—posting, deleting, replying—this MCP is what you need.

The headache of managing multiple brand voices.

Today, keeping up with a company's social presence means logging into LinkedIn and jumping between tabs. You copy the text for an announcement from your CMS, paste it into the posting box, hit send, then switch to the comments section just to see who replied. If you have five pages, that's five sets of clicks, five different logins, and a high chance you'll miss a crucial reply.

With this MCP, all those manual steps vanish. You simply tell your agent, 'Post our weekly update across all managed accounts.' Your agent handles the publishing and posting for every page in one go. It's instant content distribution without leaving your workflow.

Control your entire social conversation with LinkedIn Page Management MCP

The biggest time drain is back-and-forth moderation. You see a comment, you copy the reply draft, and then you paste it into the post's comment thread on a different tab. It's clicking, copying, pasting—a painful cycle of inefficiency.

Now, your agent handles that entire loop. You ask it to moderate comments or respond as the organization, and it manages the whole exchange for you. Your focus stays where it belongs: on strategy, not clicks.

LinkedIn Page Management: 7 Tools

These tools allow your agent to perform specific actions across your company's LinkedIn presence, from listing accounts to managing post interactions.

#	TOOL	DESCRIPTION
01	<code>list_post_comments</code>	Pulls a list of all comments left on a specific LinkedIn post.
02	<code>create_post_comment</code>	Adds a new comment to an existing post, posting it as the organization's account.
03	<code>create_page_post</code>	Publishes brand-written text updates directly to your company page feed.
04	<code>list_post_likes</code>	Retrieves the total count of likes and reactions on a designated post.
05	<code>list_managed_pages</code>	Finds and lists all LinkedIn Company Pages where your account has management roles.
06	<code>delete_page_post</code>	Permanently removes a specific post from the company page history.
07	<code>list_page_posts</code>	Gets a list of recent posts that have already been published from the company page.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U List all LinkedIn Company Pages I manage.

I've retrieved your managed pages. You have roles on 2 pages: 'Global Tech Solutions (ID: 12345)' and 'Creative Agency (ID: 67890)'.

U Create a new post on page '12345' with the text 'Welcome to our weekly update!'.

Successfully published your post to Global Tech Solutions. The post URN is 'urn:li:share:987654321'.

U Show comments for the post 'urn:li:share:987654321'.

I found 3 comments on that post. Highlights include a question from 'Jane Smith' about product availability and a thank you message from 'Robert Brown'.

Frequently Asked Questions

01 How do I find all my LinkedIn Company Pages using LinkedIn Page Management MCP?

You use the `list_managed_pages` tool. It quickly finds and lists every single Company Page ID where your account has management rights, so you know exactly what needs updating.

02 Can I schedule posts with LinkedIn Page Management MCP?

This MCP focuses on immediate actions; it doesn't offer a scheduling calendar. You use `create_page_post` to publish updates right away when you tell your agent to.

03 What if I need to delete an old post using LinkedIn Page Management MCP?

You run the `delete_page_post` tool. Your agent takes the specified page and content identifier, then permanently removes the outdated material for you.

04 Does LinkedIn Page Management MCP only handle text posts?

Currently, it specializes in managing text-based updates and commentary. If you have images or videos, you'll need a separate tool to upload them first.

05 How do I check if a post was successful using LinkedIn Page Management MCP?

You use `list_post_likes` after publishing content. This instantly retrieves the total count of likes and reactions, showing you how well your message performed.

06 Which scopes are required to post as an organization?

Your access token must include `w_organization_social` to create posts and comments, and `r_organization_social` to list them.

07 How do I find my Organization ID?

Use the `list_managed_pages` tool. It will return all organizations where you have management roles along with their unique IDs.

08 Can I reply to a specific comment?

The current version supports creating top-level comments on posts. Support for threaded replies (using the `parent` field) is handled via the same comment tool by providing the parent URN if supported by the engine.
