Local Board Application Planner MCP.

Turn raw candidacy data into a structured execution plan.

Local Board Application Planner MCP converts board requirements and your personal experience into actionable roadmaps. It helps you manage deadlines, organize necessary documentation, plan outreach to references, and prepare for interviews by aligning your professional history with specific selection criteria.

A+ Quality Score 100/100

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Local Board Application Planner MCP

4 tools available

Cloud-hosted on Vinkius

Applying for a board position involves more than just submitting a resume. You have to manage tight deadlines, gather specific evidence of leadership, and coordinate with references. This MCP handles the heavy lifting of the planning phase. You provide your candidate data and the board's requirements, and your AI client builds the framework you need to succeed.

Instead of staring at a blank page, you can use this MCP to map out exactly when to finish your documents or when to reach out to supporters. It identifies the gaps between your current CV and what the board is looking for, so you aren't caught off guard during an interview. It turns a vague goal into a series of specific, manageable milestones.

Core Capabilities

01 — Timeline Generation

Your agent uses this to build a schedule based on your weekly availability and the final deadline.

02 — Gap Analysis

The AI uses this to check your current documents against the specific requirements of the board.

03 — Interview Alignment

Your agent uses this to match your professional history with the selection criteria used by the board.

04 — Outreach Scheduling

The AI uses this to organize when and how you contact your references.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/local-board-application-planner — connect your AI agent in three steps.

- 01 Connect the MCP to Claude, Cursor, or Windsurf via Vinkius.
- 02 Provide the board's requirements and your personal professional data to your AI client.
- 03 Ask your agent to generate a timeline, checklist, or prep agenda.
- 04 Follow the structured roadmap to complete your application.

Connect the MCP to your client and start feeding it your application data.

Built For

This MCP is built for professionals pursuing leadership roles on local or corporate boards.

Executive Candidates

They hand off their professional history and board requirements to generate interview prep.

Career Strategists

They use the tool to build structured roadmaps for clients applying to boards.

Community Leaders

They use the timeline and checklist tools to manage local board applications.

What Changes When You Connect

- 01 Converts raw requirements into a step-by-step schedule.
- 02 Identifies missing documentation before you submit your application.

- 03 Connects your specific career achievements to board selection criteria.
- 04 Organizes reference outreach into a manageable plan.

Real-World Applications

Deadline Management

Use the timeline tool when you have a fixed application date and limited weekly hours to work on it.

Interview Preparation

Use the agenda tool to prepare narratives that prove you meet specific oversight criteria.

Document Readiness

Use the checklist tool to ensure your CV and bio meet the specific tier requirements of a board.

Reference Coordination

Use the outreach plan to ensure your supporters are contacted in a timely manner.

Patterns to Avoid

Vague application planning

⚠ AVOID

You tell your agent you want to apply for a board seat next month and hope it figures out the steps.

✓ INSTEAD

Provide your specific deadline and weekly availability to ``get_application_timeline`` for a realistic schedule.

Ignoring document gaps

⚠ AVOID

You submit your standard CV without checking if it actually meets the specific tier requirements of the board.

✓ INSTEAD

Run ``get_document_checklist`` to see exactly which pieces of evidence are missing from your current files.

Generic interview prep

❌ AVOID

You practice common interview questions that have nothing to do with the board's specific selection criteria.

✓ INSTEAD

Use ``get_interview_prep_agenda`` to align your past achievements with the exact criteria the board uses to judge candidates.

The Right Fit

Connect this MCP if you are a professional or strategist managing specific board application deadlines. Do not use it if you are just browsing roles without a target. The decision depends on whether you have a specific set of board requirements to match against your own experience.

The 4 Tools in the Local Board Application Planner

These tools turn board requirements and your professional history into a structured, actionable application roadmap.

#	TOOL	DESCRIPTION
01	get_application_timeline	This tool calculates your specific milestones based on the application deadline, the requirements, and how much time you can actually commit each week.
02	get_document_checklist	This tool compares your existing documents against the board's requirements to show you exactly what is missing.
03	get_interview_prep_agenda	This tool builds a tailored interview preparation plan that connects your past experiences to the specific criteria the board uses for selection.
04	get_reference_outreach_plan	This tool creates a schedule and plan for contacting your professional supporters and references.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U I need a timeline for a board application due on 2025-05-01. I can work on this 5 hours per week.

Based on your 5-hour weekly availability and the May 1st deadline, your milestones are: 1. Data Gathering (Completed by March 15), 2. Reference Outreach (Completed by March 30), 3. Document Drafting (Completed by April 15), 4. Final Review (Completed by April 25).

U What documents do I need for a Standard tier application? I have my CV and a bio.

For a Standard tier application, you have: CV (ready), Bio (ready). You still need: Letter of Recommendation (needs drafting, requires specific examples of leadership), and Statement of Intent (needs drafting, requires evidence of strategic oversight).

U How should I prepare for an interview where they look for 'Strategic Financial Oversight' and I have 10 years of CFO experience?

Your preparation modules include: 1. Financial Governance Case Studies, 2. Risk Management Narratives. You should practice: Describing the specific time you managed a \$50M budget restructuring to demonstrate oversight.

Frequently Asked Questions

01 What AI clients can I use with this MCP?

You can use this MCP with any compatible client, including Claude, Cursor, Windsurf, and VS Code.

02 How does the timeline tool work?

The tool takes your application deadline and your weekly availability to calculate specific milestones for your application process.

03 Can this MCP help me prepare for interviews?

Yes, the interview prep tool generates an agenda that aligns your specific professional history with the selection criteria of the board.

04 Do I need to host this myself?

No, Vinkius hosts and manages the MCP for you. You just connect your client and start using the tools.

05 How does it identify missing documents?

The document checklist tool compares the list of documents you already have against the requirements provided by the board.

06 How do I know if my documents are ready?

You can use the ``get_document_checklist`` tool. It applies evidence-first writing rules to determine if your provided documents contain enough specific experience to support your claims.

07 Can this help me prepare for the interview?

Yes, the ``get_interview_prep_agenda`` tool maps your relevant experience directly to the board's selection criteria to create a focused rehearsal plan.

08 How does the timeline account for my schedule?

The ``get_application_timeline`` tool requires your availability as an input to ensure milestones are realistic and account for necessary dependencies.
