Local Sports Support Plan MCP

Turn raw volunteer data into organized event schedules.

Local Sports Support Plan MCP acts as a logistics engine for sports organizers. It takes your messy lists of volunteers, equipment, and event requirements and turns them into structured, actionable plans. You can use it to build timelines, assign roles, and coordinate gear movement through any MCP-compatible client.

A+ Quality Score 95.83/100

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Local Sports Support Plan MCP

4 tools available

Cloud-hosted on Vinkius

Running a local sports tournament or a weekend league means juggling too many moving parts. You have volunteers with different skills, equipment that needs to be moved around, and a strict schedule to keep. This MCP handles that heavy lifting. Instead of manually mapping out who does what, you give your AI client the raw data and let it build the framework. You can match specific volunteers to roles like first aid or refereeing based on their actual skills. It also builds chronological timelines that respect task dependencies, so you aren't trying to set up gear before the field is even ready. It even handles the logistics of moving equipment between people and generates the messages you need to send to your team so everyone stays on the same page.

Core Capabilities

01 — Volunteer Matching

Your agent uses this to assign specific people to roles based on their certifications and availability.

02 — Schedule Construction

The AI builds a step by step timeline that accounts for task dependencies.

03 — Asset Coordination

This capability manages the handoff of physical equipment between different staff members.

04 — Team Messaging

Your agent generates text templates to notify volunteers of their assignments.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/local-sports-support-plan — connect your AI agent in three steps.

- 01 Connect your AI client to the Vinkius hosted MCP.
- 02 Provide your volunteer lists, equipment needs, and event dates.
- 03 Ask your agent to generate rosters, timelines, or handoff plans.
- 04 Review the structured outputs and send messages to your team.

You connect the MCP to your preferred AI client and start feeding it your event data.

Built For

This MCP is built for people managing the logistics of local athletic events and community sports leagues.

Tournament Director

Hands off volunteer lists and event dates to build full operational plans.

League Coordinator

Uses the tool to manage equipment movement and staff scheduling.

Volunteer Manager

Provides skill data to generate rosters and communication templates.

What Changes When You Connect

- 01 Converts raw volunteer data into structured assignments.
- 02 Builds chronological schedules that respect task order.
- 03 Coordinates physical gear movement between stakeholders.
- 04 Generates ready to send messages for team coordination.

Real-World Applications

Soccer Tournament Setup

Organizers use it to map out setup times and assign first aid volunteers to specific matches.

Volunteer Communication

Managers generate text templates to quickly update volunteers on their shift changes.

Equipment Management

Coordinators use the handoff tool to track how gear moves from storage to the field.

Multi Day Events

Directors build long term timelines for tournaments spanning several days.

Patterns to Avoid

Manual Roster Management

❌ AVOID

You try to manually match every volunteer to a role in a spreadsheet while ignoring their specific certifications.

✓ INSTEAD

Feed your volunteer skill data to the agent and use `generate\_support\_roster` to get accurate assignments.

Disorganized Equipment Tracking

❌ AVOID

You assume everyone knows where the gear is and hope it gets to the field on time.

✓ INSTEAD

Use `plan\_equipment\_handoff` to track exactly how gear moves from person to person.

Fragmented Event Timelines

❌ AVOID

You schedule the refereeing before the field setup is actually finished.

✓ INSTEAD

Run ``create_task_timeline`` to build a schedule that respects task dependencies and logical order.

The Right Fit

Connect this MCP if you manage local tournaments or community leagues with moving parts like gear and volunteers. Do not connect it if you are running a single-day event with no equipment needs or a static staff. The deciding factor is whether you need to coordinate physical assets and shifting personnel schedules.

Local Sports Support Plan MCP Tools

These tools handle the logistics of volunteer scheduling, equipment movement, and team communication.

#	TOOL	DESCRIPTION
01	create_task_timeline	This tool builds a chronological schedule of every necessary action for your event. It ensures tasks follow a logical order so nothing gets missed.
02	generate_communication_templates	This tool produces ready to use text messages for your team. You can send these directly to volunteers to keep them informed.
03	generate_support_roster	This tool creates a finalized list of volunteer assignments. It matches people to specific roles based on their skills and availability.
04	plan_equipment_handoff	This tool coordinates the movement of physical gear between different people. It helps track how equipment moves from one stakeholder to the next.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U Generate a support roster for a soccer match with 5 volunteers who have first aid skills.

The roster has been generated with 5 volunteers assigned to Referee and First Aid roles based on their certifications.

U Create a timeline for a tournament starting on June 1st and ending on June 3rd.

The tournament timeline is ready, including setup on May 31st and equipment handoff on June 1st.

U Prepare communication templates for the assigned volunteers.

The communication templates are ready, including role assignments and shift times for all volunteers.

Frequently Asked Questions

01 What can this MCP do for sports organizers?

It acts as a logistics engine that turns volunteer and equipment data into actionable plans, schedules, and rosters.

02 Which AI clients can I use with this MCP?

You can use this with any MCP-compatible client like Claude, Cursor, Windsurf, or VS Code.

03 How does the volunteer matching work?

The tool matches volunteers to specific roles by looking at their individual skills and their availability for certain shifts.

04 Can it help with equipment logistics?

Yes, it includes a tool specifically designed to coordinate how physical assets are moved between different people involved in the event.

05 Do I need to host the MCP myself?

No, Vinkius hosts and manages the MCP for you, so it is ready to use immediately after you connect your client.

06 How does the roster generation work?

The ``generate_support_roster`` tool matches volunteers to specific roles by checking their skills and availability against the required team needs and organizer constraints.

07 Can I manage equipment movement?

Yes, you can use ``plan_equipment_handoff`` to coordinate the movement of physical assets like jerseys or balls between different locations and personnel.

08 How are task dependencies handled?

The ``create_task_timeline`` tool ensures that tasks are scheduled in a logical sequence, meaning a task will only start once its prerequisite tasks are finished.
