

MCP SERVER

NO CODE

CLOUD HOSTED

MailboxPower MCP

Automate physical gifts and direct mail campaigns.

MailboxPower connects your AI agent directly to physical gifting and direct mail marketing. It lets you manage entire campaigns—from creating contact lists to sending personalized cards and gifts—all using natural conversation from any compatible client.

A+ Quality Score 100/100

gifting

The infrastructure that powers AI agents in the real world.

Vinkius connects AI to the world's software through secure, enterprise-grade infrastructure — enabling real-world execution at scale, built on the Model Context Protocol (MCP).

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the cloud infrastructure where AI agents connect to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

MailboxPower MCP

9 tools available

Cloud-hosted on Vinkius

Need to keep clients happy with more than just email? This MCP handles the physical side of relationship building. You can talk to your AI agent and ask it to draft a campaign for high-value prospects, then execute that plan by sending out personalized gifts or thank you cards. It manages everything from creating new contacts to tracking shipments across multiple campaigns. The whole process works through natural conversation; no complex dashboards needed. Once connected via Vinkius, your AI client handles the logistics—it knows how to identify who gets what and when it needs to ship it. You just talk to your agent and watch the physical mail roll out.

Core Capabilities

01 — Send personalized shipments

Instruct your agent to send a specific card or gift to one or more contacts.

02 — Manage contact lists

Create new records, retrieve existing contact details, and add people to predefined groups.

03 — Automate outreach flows

Start or modify automated mailing sequences for specific contacts.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/mcp/mailboxpower — connect your AI agent in three steps.

- 01 Subscribe to the MailboxPower MCP and input your unique API key.
- 02 Connect this MCP to your preferred AI agent (like Claude or Cursor).
- 03 Tell your agent what you need—for example, 'Send a thank-you gift to the top 10 clients.' — and it handles the rest.

The bottom line is: your AI client acts as the conversation layer between your thoughts and physical fulfillment services.

Built For

This MCP is for marketing managers, customer success directors, or sales ops specialists who know that relationship building requires a physical touch. If you're tired of manually cross-referencing spreadsheets to figure out who gets what gift on which holiday, this is for you.

Marketing Director

Running quarterly client appreciation campaigns, ensuring the right branded gift reaches the target segment.

Customer Success Manager

Sending timely thank-you cards or retention gifts to clients after a major support milestone.

Sales Operations Analyst

Cleaning up and organizing contact data, ensuring every prospect is properly added to a mailing group before an outreach campaign starts.

What Changes When You Connect

- 01 You don't need to switch between your CRM, mailing tool, and spreadsheet. Your agent handles the whole sequence—from using `create_contact` to finally calling `send_shipment` —all in one chat window.

-
- 02** Campaign planning gets specific. You can tell your agent to draft a campaign for 'top clients' and then execute it by adding them all to a new group using `add_contact_to_group` .
-
- 03** Get immediate visibility on physical mail status. By calling `list_automations` , you see exactly which gifts are in transit, delivered, or pending approval.
-
- 04** It simplifies data prep. Instead of manually finding recipients, your agent can use `list_contacts` to pull the entire list and then execute a bulk send using `send_shipment` across all addresses.
-
- 05** Build complex customer journeys instantly. You can set up an automation for new prospects by first calling `add_contact_to_automation` , guaranteeing they receive follow-up physical materials.
-

Real-World Applications

A client just signed a big deal and needs to feel appreciated.

The sales rep asks their agent: 'Send a premium gift box to John Smith.' The agent uses `get_contact` to confirm details, then calls `send_shipment` , completing the physical gesture in seconds.

Customer Success needs to clean up old records.

The CSM asks: 'Show me all contacts who haven't received an update in six months.' The agent runs `list_contacts` , filters them, and then calls `add_contact_to_automation` for follow-up.

Marketing needs to run an end-of-year campaign.

The marketing manager instructs: 'Create a new group for everyone who bought Product X and send them a holiday card.' The agent uses `create_group` and then triggers the automated mailing flow.

A new client list needs to be onboarded correctly.

The ops analyst asks: 'Take this spreadsheet of names and add them all to the 'New Prospects' group.' The agent iterates through records, calling `create_contact` for each one, and then using `add_contact_to_group` .

Patterns to Avoid

Thinking you need a separate mailing platform.

✗ AVOID

The user manually exports contact lists to Mailchimp, uploads them to another service, and then tries to track the results in a third dashboard. This is slow and prone to data sync errors.

✓ INSTEAD

Use this MCP to manage contacts directly. You can use ``list_contacts`` to get the full dataset, then use that data to execute campaigns with ``send_shipment``—everything stays connected.

Only thinking about digital communication.

✗ AVOID

Writing a perfect email sequence but forgetting that a physical card or gift would have had a much stronger impact on the client relationship.

✓ INSTEAD

Don't just send emails. Use your agent to ``add_contact_to_automation`` so you can combine digital nurture with a tangible gesture, like sending a follow-up thank-you gift.

Not knowing who exists in the system.

✗ AVOID

Trying to send a card without first confirming if the contact record is up to date or if they belong to the correct mailing segment.

✓ INSTEAD

Always start by checking data integrity. Use ``list_groups`` and then ``get_contact`` before attempting any physical sends, ensuring you hit all the necessary steps.

The Right Fit

Use this MCP if your sales or marketing strategy relies on tangible, personalized touchpoints—physical cards, branded gifts, or promotional items. If your primary goal is managing and sending these goods via natural conversation, this MCP works for you. Don't use it if you only need to manage digital content like email campaigns; in that case, a standard CRM integration would suffice. Also, don't use it if you are looking to analyze web traffic or optimize site conversion rates—you'd need a dedicated analytics tool. This is strictly for managing the physical fulfillment lifecycle, from contact creation (`create_contact`) through group segmentation (`add_contact_to_group`) and final delivery confirmation (`send_shipment`).

Managing Client Relationships Today Is a Spreadsheet Nightmare.

Right now, building client loyalty means jumping through hoops. You have to check the CRM for contact status, pull a list of people who hit a milestone, then export that data into an address book format, and finally cross-reference it with your inventory to see what gifts are available. It's three different tabs and at least four hours of copy-pasting.

With this MCP, the process is one chat prompt away. You tell your agent who needs a gift or card, and it handles the lookup, the grouping (`add_contact_to_group`), and the scheduling. Your agent acts as the central coordinator for all physical outreach.

MailboxPower MCP Delivers Physical Campaigns Effortlessly.

Manual steps like checking if a recipient is in the correct mailing list, verifying their address, and tracking multiple shipments are eliminated. The system manages this complexity behind the scenes.

You stop managing workflows and start having conversations. Your agent takes care of the logistics, letting you focus entirely on relationship building.

MailboxPower: 9 Contact & Shipment Tools

These tools allow your agent to fully manage the entire lifecycle of a mailing campaign, from creating records to sending physical items.

#	TOOL	DESCRIPTION
01	<code>add_contact_to_automation</code>	Starts an automated gift or card sending flow for a specific contact.
02	<code>add_contact_to_group</code>	Adds an existing contact record to one of your predefined mailing groups.
03	<code>create_contact</code>	Creates a brand new recipient profile within the system.
04	<code>create_group</code>	Establishes a new segment or group for mailing purposes.
05	<code>get_contact</code>	Retrieves detailed information about any specific contact record.
06	<code>list_automations</code>	Shows all currently active or paused automated mailing campaigns.
07	<code>list_contacts</code>	Retrieves a list of every contact stored in the system for review.
08	<code>list_groups</code>	Provides a complete directory of all existing mailing groups and segments.
09	<code>send_shipment</code>	Sends an actual physical card or gift to a specified contact address.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U Show the product catalog and send a thank-you card to a client.

 Catalog: 45 products. Cards (12): Thank You (\$3.50), Birthday (\$4.00), Holiday (\$4.50). Gifts: Coffee Mug (\$15), Gift Box (\$35), Premium Basket (\$75). Promo: Branded Pen (\$5), Notebook (\$12). Card sent! Thank You card to Sarah Chen, 123 Main St, NY 10001. Message: 'Thank you for your partnership!' Est. delivery: May 1-3.

U Create a gift campaign for the top 10 clients.

 Campaign created! 'Q2 Client Appreciation'. Recipients: 10 top clients. Product: Premium Gift Box (\$35 each). Total: \$350 + \$45 shipping. Personal message: 'Thank you for being an amazing partner!' Schedule: Ships May 1. Estimated delivery: May 3-6. Status: Pending approval. Approve to send.

U Show delivery status for all active campaigns and contact lists.

 Active campaigns: 2. 'Spring Appreciation' (25 gifts, 22 delivered , 3 in transit). 'New Client Welcome' (8 cards, 8 delivered). Delivery rate: 100% (no returns). Avg delivery: 3.1 days. Contact lists: 3. 'Top Clients' (25), 'New Clients Q2' (14), 'Partners' (8). Total contacts: 47.

Frequently Asked Questions

01 How do I use MailboxPower MCP to send a gift?

To send a physical item, ask your agent to call `send_shipment`. You'll need to provide the recipient details and specify which card or gift you want sent.

02 Can I create a mailing segment using MailboxPower MCP?

Yes. First, use ``create_group`` to make the segment, then use ``add_contact_to_group`` for all the contacts you want included in that campaign.

03 What if I need a new client record added?

Use the ``create_contact`` tool. This ensures the recipient is properly documented before you try to send them any physical mail or add them to an automation sequence.

04 Does MailboxPower MCP track delivery status?

Absolutely. Your agent can call ``list_automations`` and provide a comprehensive report on which shipments are in transit, delivered, or if there were any issues.

05 Is MailboxPower MCP only for new contacts?

No. You can use the ``get_contact`` tool to retrieve details on existing clients and manage their records just as easily.
