Manga Volume Counter MCP

Keep your manga library counts accurate and organized.

Manga Volume Counter MCP gives your AI client direct access to your manga collection data. It lets you check total volume counts, see which series are in a specific collection, and calculate exactly how many more volumes you need to buy to hit a target number for any series or set.

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Manga Volume Counter MCP

4 tools available

Cloud-hosted on Vinkius

Managing a growing manga library is a headache when you're trying to track completion status or figure out how much shelf space you'll need for a new series. This MCP turns your AI client into a dedicated collection manager. Instead of manually counting volumes or checking series lists, you can just ask your agent for a summary of a specific collection or a deep dive into a single series. You can quickly see which series are currently in your possession or identify exactly how many volumes are missing from a set you're trying to complete. It's built for anyone who wants to move away from messy spreadsheets and use their AI to handle the math and organization of their physical or digital manga library.

Core Capabilities

01 — Collection Summaries

Your agent can pull total volume and series counts for any collection you've defined.

02 — Series Auditing

The AI can check the specific volume count and completion status of individual series.

03 — Gap Analysis

Your agent calculates the exact number of volumes needed to reach a collection target.

04 — Inventory Listing

The AI can list every series currently held within a specific collection.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/manga-volume-counter — connect your AI agent in three steps.

- 01 Connect the MCP to your client like Claude or Cursor via Vinkius.
- 02 Ask your agent a question about your manga collections.
- 03 The agent uses the specific tool needed to fetch your data.
- 04 Your agent provides the volume counts or series lists directly in the chat.

Connecting this MCP to your AI client gives you immediate access to your collection data.

Built For

This MCP is for collectors who want to use AI to manage their physical or digital manga libraries.

Manga Collectors

People who want to track series completion and volume counts without manual entry.

Library Organizers

Users who need to audit large collections of books and manga series.

What Changes When You Connect

- 01 Eliminates manual volume counting by letting your agent do the math.
- 02 Provides instant visibility into which series are missing from a collection.

- 03 Tracks completion status for individual manga series automatically.
-

Real-World Applications

Completion Tracking

Ask your agent how many volumes are left to finish a specific long-running series.

Collection Auditing

Get a full list of series within a specific collection to verify your inventory.

Budget Planning

Use gap analysis to figure out how many volumes you need to purchase to hit a goal.

Inventory Summaries

Get a quick count of total volumes across your entire library.

Patterns to Avoid

Manual Spreadsheet Tracking

❌ AVOID

You spend your weekend typing every single volume number into a spreadsheet to see what you own.

✓ INSTEAD

Let your agent handle the math. Use ``get_collection_summary`` to get an instant overview of your series and volume counts instead.

Guessing Completion Status

❌ AVOID

You assume you have the full set of a series but realize halfway through a bookstore trip that you're missing volumes.

✓ INSTEAD

Check the actual status of a series before you buy anything by using ``get_series_details``.

Vague Budgeting

❌ AVOID

You set aside a random amount of money for new manga without knowing how many books you actually need.

✓ INSTEAD

Get an exact number for your shopping list. Use ``calculate_collection_gap`` to find out exactly how many volumes you need to reach your target.

The Right Fit

Connect this MCP if you own a physical or digital manga library and want to stop manual counting. Do not connect it if you only own a handful of books and don't care about tracking completion. The decision depends on whether you want your agent to handle the inventory math for you.

Manga Volume Counter Tools

These tools let your agent manage, audit, and calculate the exact state of your manga collections.

#	TOOL	DESCRIPTION
01	calculate_collection_gap	This tool calculates the number of volumes required to reach a specific target count for your collection.
02	get_collection_summary	Use this to get a high level overview of how many series and volumes are in a specific collection.
03	get_series_details	This tool provides specific details for a single manga series, including volume counts and completion status.
04	list_series_in_collection	This tool returns a list of all manga series contained within a given collection.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U What is the total volume count for collection 'my-manga-shelf'?

The collection 'my-manga-shelf' contains a total of 142 volumes across 12 series.

U List all the series in the 'summer-reading' collection.

The 'summer-reading' collection includes: One Piece (105 volumes), Naruto (72 volumes), and Bleach (74 volumes).

U How many more volumes do I need to reach 200 volumes in my 'collector-set'?

You currently have 185 volumes in 'collector-set', so you need 15 more volumes to reach your target of 200.

Frequently Asked Questions

01 What can this MCP do with my manga collection?

It allows your AI client to count volumes, list series in a collection, and calculate how many volumes you need to reach a target.

02 Which AI clients can I use with this MCP?

You can use this MCP with any compatible client, including Claude, Cursor, Windsurf, and VS Code.

03 How do I find out if a series is finished?

You can ask your agent to use the series details tool to check the completion status of a specific manga.

04 Can I calculate how many books I need to buy?

Yes, the tool can determine the gap between your current volume count and a target number you set.

05 Do I need to host this myself?

No, Vinkius hosts and manages the MCP so it is ready to use immediately after you connect.

06 How do I see the total number of volumes in my collection?

You can use the ``get_collection_summary`` tool to get the total volume count and the number of series in a specific collection.

07 Can I check if a specific manga series is finished?

Yes, the ``get_series_details`` tool returns the completion status for any given series.

08 How many more volumes do I need to reach my goal?

Use the ``calculate_collection_gap`` tool by providing the collection ID and your target volume count.

Go Live in 60 Seconds

Get your connection token from cloud.vinkius.com, then paste the endpoint URL into any MCP-compatible client.

YOUR MCP ENDPOINT
