

MCP SERVER

NO CODE

CLOUD HOSTED

Memorial Event Planner MCP.

Handle all service logistics and finances through your AI agent.

Memorial Event Planner MCP handles the heavy lifting of organizing memorial services. Your AI client uses this tool to coordinate venue bookings, catering, and floral arrangements while keeping a close eye on timelines and budgets. It manages the financial side too, letting you track donations and split costs among family or friends without the manual math.

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Memorial Event Planner MCP

5 tools available

Cloud-hosted on Vinkius

Organizing a memorial service is difficult enough without having to juggle spreadsheets and receipts. This MCP gives your AI agent the ability to act as a dedicated event coordinator. You can hand off the logistics of catering, travel, and floral orders to your agent, which uses `manage_logistics_item` to keep everything organized.

Instead of hunting through emails for updates, you can ask your agent for a quick status report or a breakdown of the upcoming schedule. It keeps the financial details just as organized. You can use it to track incoming memorial funds or split a single catering bill among several people. It's built to take the administrative burden off your plate so you can focus on the service itself.

Core Capabilities

01 — Logistics Management

Your agent uses this to book and track catering, flowers, and travel.

02 — Financial Tracking

The agent records donations and monitors the total budget.

03 — Expense Splitting

Your agent calculates how much each person owes for shared costs.

04 — Timeline Oversight

The agent monitors the schedule to ensure tasks stay on track.

05 — Status Reporting

Your agent provides instant summaries of event progress and spending.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/memorial-event-planner — connect your AI agent in three steps.

- 01
- Connect the MCP to Claude, Cursor, or Windsurf via Vinkius.
- 02
- Tell your agent what you need to organize.
- 03
- The agent uses the tools to book logistics or calculate costs.
- 04
- Ask for status updates or timeline checks as the event approaches.

Connect the MCP to your preferred AI client and start managing the event through natural language.

Built For

This MCP is for anyone tasked with the administrative side of organizing a memorial service.

Family Coordinators

Hand off the math for shared expenses and donation tracking to your agent.

Funeral Service Assistants

Use the agent to manage logistics like catering and floral orders.

Event Organizers

Let your agent maintain the event timeline and status reports.

What Changes When You Connect

- 01
- Reduces manual math by automating shared expense calculations.
- 02
- Centralizes logistics like catering and venue bookings in one place.
- 03
- Provides instant updates on event progress and budget status.

04 Keeps donation records organized and easy to access.

Real-World Applications

Splitting Bills

Your agent calculates exactly what each family member owes for a shared catering bill.

Tracking Donations

The agent keeps a record of all memorial funds received.

Scheduling Tasks

Your agent monitors the timeline to remind you about upcoming floral or venue deadlines.

Logistics Coordination

The agent manages specific items like travel arrangements or venue bookings.

Patterns to Avoid

Manual expense math

❌ AVOID

You try to calculate how much each family member owes for a catering bill using a handheld calculator and a notepad.

✓ INSTEAD

Let your agent handle the math directly by using ``calculate_shared_expenses`` to split costs accurately.

Fragmented logistics tracking

❌ AVOID

You keep track of floral orders in one text thread and catering details in a separate email chain.

✓ INSTEAD

Centralize everything by using ``manage_logistics_item`` to keep all service details in one place.

Blind scheduling

❌ AVOID

You realize too late that the venue booking deadline passed because you weren't checking your calendar.

✓ INSTEAD

Stay ahead of deadlines by using ``get_event_timeline`` to pull the current schedule and upcoming tasks.

The Right Fit

Connect this MCP if you are managing the administrative side of a memorial service and need to coordinate multiple people or vendors. Do not connect it if you are just attending a service or don't need to track budgets and logistics. The decision depends on whether you need an agent to handle the math and scheduling for you.

Memorial Event Planner MCP Tools

These tools give your agent full control over event logistics, financial tracking, and scheduling.

#	TOOL	DESCRIPTION
01	get_event_overview	This tool gives your agent a high-level summary of the entire event status.
02	manage_logistics_item	Use this to coordinate specific details like catering, floral arrangements, or venue bookings.
03	get_event_timeline	This tool lets your agent pull up the current schedule and upcoming tasks.
04	track_donations	This tool records and monitors memorial funds and contributions.
05	calculate_shared_expenses	Use this to split costs, such as catering or venue fees, between different people.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U What is the current status of my memorial event?

The event is currently 40% complete. The total estimated budget is \$5,000, and \$2,000 has been spent so far.

U Help me split a \$1,200 catering bill between Alice, Bob, and Charlie.

Each participant (Alice, Bob, and Charlie) is responsible for \$400.

U Show me the upcoming tasks for the memorial service.

The next tasks are: 1. Confirm floral delivery (Scheduled for tomorrow), 2. Finalize venue payment (Scheduled for Friday).

Frequently Asked Questions

01 What can this MCP do for a memorial service?

It manages logistics like catering and flowers, tracks donations, splits shared expenses, and monitors the event timeline.

02 Which AI clients can I use with this MCP?

You can use this MCP with any compatible client, including Claude, Cursor, and Windsurf.

03 Can I use this to split costs between family members?

Yes, the `calculate_shared_expenses` tool allows your agent to divide bills among multiple contributors.

04 How do I track the budget?

Your agent can provide a full event overview, including total budget and amount spent, using the `get_event_overview` tool.

05 Do I need to host this myself?

No, Vinkius hosts and manages the MCP for you, so it is ready to use immediately after you connect.

06 How can I see the total budget for my event?

You can use the ``get_event_overview`` tool to see a summary of the total estimated budget and actual spent amounts.

07 Can I split the costs between family members?

Yes, the ``calculate_shared_expenses`` tool calculates how much each participant is responsible for based on the total amount.

08 How do I record a donation for a charity?

Use the ``track_donations`` tool and set the ``isCharityDonation`` flag to true to ensure funds are tracked separately from event costs.
