

MCP SERVER

NO CODE

CLOUD HOSTED

MINDBODY MCP

Manage Studio Schedules, Clients & History

MINDBODY Health & Wellness connects your AI agent directly to MINDBODY, letting you manage entire studio operations through natural conversation. Instantly check class schedules, look up full client profiles, and track historical attendance records without opening a single dashboard tab.

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

MINDBODY Health & Wellness MCP

10 tools available

Cloud-hosted on Vinkius

Running a wellness studio means juggling schedules, membership status, equipment availability, and staff rosters—all in different tabs. This MCP lets you talk to MINDBODY about your business. You can ask for today's class schedule or look up why a client's account is flagged. The system gathers all that data instantly, pulling together everything from the physical location details to detailed visit history. When you connect this via Vinkius, your AI agent acts like an internal expert who knows every corner of your studio management software. You don't need to know where to click; you just ask a question and get a clean answer.

Core Capabilities

01 — View Class Schedules

List all upcoming classes, including which staff members are assigned to teach them.

02 — Search for Client Data

Find specific client profiles using their name or email address.

03 — Check Membership Status

Retrieve a client's detailed membership information and full purchase history.

04 — Track Attendance History

Review past and upcoming class visits for specific people or the entire studio roster.

05 — Audit Staff & Resources

Get lists of all employees, instructors, and available equipment/rooms used by the business.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/mcp/mindbody-health-wellness — connect your AI agent in three steps.

- 01** Subscribe to this MCP and enter your MINDBODY API Key and Site ID into Vinkius.
- 02** Tell your AI agent what you need—for example, 'What was the attendance at yesterday's yoga class?'
- 03** The MCP runs the necessary lookups and sends back a clear summary of the data.

The bottom line is that you get all your studio management data surfaced through simple conversation.

Built For

This connector is for operations managers, studio owners, and support staff who spend too much time clicking between scheduling dashboards, client CRMs, and payment systems. If you hate context switching at the end of a long day, this MCP is built for you.

Studio Owner

You use this to quickly check daily schedules or resource availability without having to open the full dashboard.

Wellness Manager

You retrieve client visit data and staff assignments for operational reporting, letting you audit class rosters fast.

Support Team Lead

You look up a client's membership status or payment history to resolve billing inquiries instantly over chat.

What Changes When You Connect

- 01** Instead of logging into the dashboard to check schedules, you can simply ask your agent for today's class schedule using `list_classes`. You get immediate answers without any clicks.

-
- 02** Need client payment details? Use `get_client_purchases` to instantly pull up a person's full purchase history and membership status right in your chat window. Great for billing questions.
-
- 03** Staff management is streamlined when you use `list_staff`. You can check who works where, or audit rosters by seeing the list of employees/instructors assigned to classes.
-
- 04** When troubleshooting client issues, combine a simple search using `search_clients` with `get_client_details` for all necessary contact and membership data in one go.
-
- 05** You never have to guess if a room is free. Use `list_resources` or `list_locations` to see what equipment or physical spaces are available across your whole network.
-

Real-World Applications

Client Inquiry: Checking Membership Status

A client calls asking if their Unlimited Monthly pass is active. Instead of manually cross-referencing the CRM and payment system, you ask your agent to run `get_client_details` and then check `get_client_purchases`. You get a definitive answer in seconds.

New Client Onboarding: Data Gathering

A new client signs up, but the support team needs their full background. You run `search_clients` first, then pull all historical data with `get_client_visits` to provide a comprehensive welcome packet.

Operational Check: Day's Schedule Audit

It's 7 AM, and you need to know who is teaching the Vinyasa Flow class today. You run `list_classes` and then immediately use `get_class_visits` for that specific time slot to confirm attendance requirements.

Site Audit: Resource Planning

You need to know if you have enough mats and rooms for a large group class. You use `list_resources` to check equipment inventory and `list_locations` to confirm which physical facility is available.

Patterns to Avoid

Trying to get everything at once

X AVOID

Asking the agent, 'Give me all client data, class schedules, and payment history for everyone.' This request is too broad and will overwhelm your AI.

✓ INSTEAD

Break it down. First, run ``list_classes`` to see what's scheduled. Then, select a specific date or class name before asking the agent to use ``get_class_visits``. Keep the scope tight.

Confusing site data with client data

X AVOID

Asking, 'What are all my clients doing?' The system doesn't know if you mean their schedule or the studio resources.

✓ INSTEAD

Be specific. To check available rooms, use ``list_resources``. To check a person's attendance, use ``get_client_visits``.

Forgetting to search for the client first

X AVOID

Asking only for 'the purchase history' without naming the client. The MCP needs context.

✓ INSTEAD

Always start by finding the person using ``search_clients``. Once you have a confirmed ID, then ask for data like ``get_client_purchases``.

The Right Fit

Use this MINDBODY Health & Wellness MCP if your daily work involves looking up operational details: Who is teaching? What rooms are open? Does Client X have an active membership and paid for it last month? This connector excels at connecting scheduling, resource management, and historical record-keeping. Don't use this if you just need general marketing copy or complex financial modeling; those require different types of tools. If your only concern is booking appointments without any class schedule data, a simple calendar integration might be better. But when the studio's pulse—the schedules, the resources, and the client history—is what matters, this MCP gives you the full operational picture.

The Daily Chore of Studio Operations

Right now, managing a wellness studio means juggling three separate systems. You open the scheduling dashboard to check class times, jump to the CRM tab to find client contact details, and then switch over to the billing portal just to verify if they paid for last month's package. This constant switching wastes minutes that add up fast.

With this MCP, you stop clicking through dashboards. You ask your agent about a problem—for instance, 'Why did Sarah Doe lose her Unlimited status?' and it pulls together data from the membership record, payment log, and attendance history instantly. It's all one conversation.

MINDBODY Health & Wellness MCP: Getting Data Instantly

You won't have to manually compare a class roster against the staff list or cross-reference resource availability with scheduled classes. You can simply ask, 'Who is teaching Yoga Flow today and are all required mats available?' and get an immediate yes/no answer.

It's not about knowing how many tools you have; it's about having one central point of truth for your business operations. Your agent acts as the expert who already has those screens open.

MINDBODY Health & Wellness: 10 Tools

These tools let you gather specific operational data points about your studio, including class rosters, staff lists, client profiles, and payment history.

#	TOOL	DESCRIPTION
01	<code>get_class_visits</code>	Gets the list of clients who attended a specific class you name.
02	<code>get_client_details</code>	Provides comprehensive information for any client, including contact data and membership status.
03	<code>get_client_purchases</code>	Retrieves a full list of purchases and payments made by a specific client over time.
04	<code>get_client_visits</code>	Pulls the overall visit history for a specified client or class roster.
05	<code>get_site_info</code>	Gathers general information about your entire MINDBODY site, like physical location details.
06	<code>list_classes</code>	Retrieves the complete schedule for all classes held at your business.
07	<code>list_locations</code>	Returns a list of every physical location managed by the business.
08	<code>list_resources</code>	Lists available equipment or rooms used for classes and studio operations.
09	<code>list_staff</code>	Provides a roster of all employees and instructors associated with the business.
10	<code>search_clients</code>	Finds clients quickly using their name or email address for lookup.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U Show me the class schedule for today.

Retrieving today's schedule... You have 5 classes scheduled, starting with 'Vinyasa Flow' at 8:00 AM by Instructor Sarah.

U Find the profile for client 'John Doe'.

Searching for 'John Doe'... I found a match! John has been a member since 2022 and has an active 'Unlimited Monthly' pass.

Frequently Asked Questions

01 How do I check today's class schedule using MINDBODY Health & Wellness MCP?

You simply ask your agent to list all classes. The system will use the `list_classes` tool, providing you with a comprehensive rundown of every scheduled session for the day.

02 Can I find out if a client is eligible to book using MINDBODY Health & Wellness MCP?

Yes. First, run `get_client_details` to check their membership status. Then you can use `get_client_purchases` to verify recent payments and ensure they're active.

03 What if I need to know who attended a specific class?

Use the `get_class_visits` tool. You just tell the agent which class you mean, and it retrieves the roster of attending clients for that time slot.

04 Does MINDBODY Health & Wellness MCP help me with staff assignments?

Yes, you can use ``list_staff`` to get a full list of employees. You can also check specific class staffing using the ``get_class_visits`` tool.

05 I need payment history for a client; which tool should I use with MINDBODY Health & Wellness MCP?

You must use ``get_client_purchases``. This tool is designed specifically to retrieve the full record of payments and purchases associated with that client.
