The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

News MCP

3 tools available

Cloud-hosted on Vinkius

This connector gives your AI client direct access to the world's largest repository of published information. You stop relying on aggregated summaries and start pulling live headlines and historical articles from thousands of publishers globally. Whether you need to monitor a competitor's mentions across every major domain, track tech trends in specific countries, or just find out what happened yesterday—you get it all here. The power comes from the ability to query this massive dataset using advanced filtering methods. Connecting your agent via Vinkius gives you instant access to this comprehensive news catalog, letting you monitor everything from niche blogs to global wire services through natural conversation. It's about getting context instantly, not just a feed of links.

Core Capabilities

01 — Search across all articles

Run highly specific keyword searches across millions of archived and live news stories.

02 — Get breaking top headlines

Retrieve the absolute latest, most important stories filtered by category or country.

03 — List available publishers

View and use a list of verified news sources to narrow down your monitoring scope.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/mcp/news — connect your AI agent in three steps.

- 01 Subscribe to this MCP in the Vinkius catalog.
- 02 Enter your required API Key into your AI client's settings.
- 03 Ask your agent a specific question, like 'What are the top tech stories in Japan?' and let it run the query.

The bottom line is you get real-time, filtered news data fed directly to your workflow without manual API calls or complex setup.

Built For

This MCP is for anyone whose job requires constant awareness of external events. If you're a researcher who needs to prove market trends with verifiable sources, or content creator always chasing the next big story angle, this tool cuts out the manual searching.

Market Research Analyst

Monitoring how many times a competitor is mentioned in global media over the last quarter to assess market penetration.

Journalist / Content Creator

Finding verified, niche sources and breaking headlines for an article or newsletter draft that needs immediate context.

Strategy Consultant

Tracking mentions of a specific industry trend (e.g., decentralized finance) across different geographic regions to advise clients on risk exposure.

What Changes When You Connect

- 01 Deep historical context: Don't just get the headlines. Use `search_everything` to pull articles from specific dates or filter by domain, giving you full proof of a trend.

-
- 02** Focused monitoring: Instead of sifting through general news, use `get_top_headLines` to pull only breaking stories in 'Technology' within the US right now.
-
- 03** Source verification: Need to know *who* is reporting it? Use `list_sources` first. This lets you narrow your search and trust specific publishers for key data points.
-
- 04** Time savings: You cut out hours of manual browsing across dozens of news sites. Your agent handles the query, filters the results, and gives you the compiled list instantly.
-
- 05** Actionable intelligence: Go beyond reading summaries. Use this MCP to build a real-time monitor that flags every mention of your company or industry keyword globally.
-

Real-World Applications

A competitor suddenly appears in the news

The marketing manager needs to know if a rival just launched a product. They ask their agent, 'Search for mentions of Competitor X and Product Y.' The MCP runs `search_everything` across all sources, immediately surfacing articles proving market activity and providing direct links.

Validating a data source's reach

The editor needs to verify if a regional sports publication is included in the main headline feed. They run `list_sources` first. This confirms the publisher is available, allowing them to build a much more reliable automated workflow.

Need the current pulse on a specific industry

The strategist is building an investment thesis. They ask for 'Top Business Headlines in Singapore today.' The agent uses `get_top_headlines`, filtering by country and category, giving them immediate, actionable context without searching multiple financial news sites.

Patterns to Avoid

Treating it like general web search

X AVOID

Asking for 'all news about crypto' without filtering sources or dates. The result is overwhelming noise from every random blog.

✓ INSTEAD

Instead, use `search_everything` and specify advanced operators: 'crypto AND (blockchain OR DeFi) NOT scam'. This focuses the results using precise keywords.

Mixing up source types

X AVOID

Trying to get top headlines while simultaneously limiting by a specific publisher name. The request fails because the tools have separate functions.

✓ INSTEAD

First, run `list_sources` to see all valid publishers. Then, use that list of IDs and pass them to `get_top_headlines` for reliable results.

Relying on memory

X AVOID

Trying to remember if the search tool requires a date filter or not. You waste time re-querying data manually.

✓ INSTEAD

Always specify your constraints upfront in the prompt, using `search_everything` with explicit keyword and date filters to ensure accuracy.

The Right Fit

Use this MCP if your core need is broad, real-time situational awareness. You want to know *what* happened—the raw facts published by global media. If you are a content creator who needs the latest scoop, or an analyst tracking market sentiment across many domains, this is mandatory. Don't use it if you only need to find one single piece of structured data (like a specific name and date). For that, a dedicated database connection would be better. Also, don't rely on this MCP for opinion pieces; it reports what was published, not who thinks the best thing.

If your task is highly constrained—for example, 'Get me the three highest-ranking business articles from France today'—you must use `get_top_headlines` specifically, as trying to force that query through `search_everything` will yield too much noise.

The struggle of tracking global trends across dozens of tabs is exhausting.

Today, monitoring a key industry trend means opening ten different news sites, jumping between finance, tech blogs, and wire services. You spend your morning copy-pasting headlines into a spreadsheet, manually checking for competitor mentions and trying to build a cohesive picture of what's really happening.

With this MCP, you simply tell your agent the topic and scope. It queries millions of articles across 150,000 sources using `search_everything`. You get a single, comprehensive output that aggregates all the relevant data points—no more tabs, no more copy-pasting.

Get instant, verifiable market intelligence with News MCP.

You used to have to manually check five different sources just to confirm a story's validity. Now, you can use `get_top_headlines` to pull the most critical stories by category and country in one query. You even use `list_sources` if you need to validate which publishers are even reporting on that topic today.

The difference is scale and speed. Instead of spending hours building a manual news digest, your agent delivers highly filtered, verifiable intelligence instantly.

News MCP: 3 Tools for Media Monitoring

These three tools allow you to search massive archives of articles, retrieve live top stories, and list available news publishers.

#	TOOL	DESCRIPTION
01	<code>search_everything</code>	Searches through millions of articles from over 150,000 news sources using advanced operators like AND or OR.
02	<code>list_sources</code>	Returns a list of verified publishers that are currently available to provide top headlines.
03	<code>get_top_headlines</code>	Retrieves the live, breaking top stories and current major headlines filtered by category or country.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U Search for the latest news about 'Quantum Computing' from the last 7 days.

I've found several articles regarding Quantum Computing. Highlights include a breakthrough in error correction from Google and a new partnership between IBM and several research universities. Would you like the full summaries?

U What are the top technology headlines in the US right now?

The top tech stories in the US currently feature new AI regulations being debated in Congress, the launch of a new flagship smartphone, and a major cybersecurity update from Microsoft. I can provide the links to any of these.

U List all available news sources for sports in France.

I've identified several sports news sources in France, including L'Equipe and various regional publishers. You can use these identifiers to filter your future searches for more targeted results.

Frequently Asked Questions

01 How does News MCP help me monitor competitors?

You use the `search_everything` tool to track mentions of specific competitor names or products. You can combine keywords with advanced operators (AND, OR) to filter out noise and focus only on relevant news coverage.

02 What is the best way to find breaking headlines?

Use ``get_top_headlines``. This tool specifically pulls the latest top stories based on filters like country or category, giving you the most current and important information immediately.

03 Can I check which news sources are available for use?

Yes. Run ``list_sources`` to get a verified list of publishers that can provide top headlines. This is useful for ensuring your monitoring scope is accurate and complete.

04 Do I need an API key to use the News MCP?

Yep, you do. You must obtain and enter your specific API Key into your client's settings before any queries will work. This authenticates access to the database.

Go Live in 60 Seconds

Get your connection token from cloud.vinkius.com, then paste the endpoint URL into any MCP-compatible client.
