

MCP SERVER

NO CODE

CLOUD HOSTED

Ontraport MCP

Manage Contacts, Sales, and Campaigns Conversationally

Ontraport connects your entire marketing automation stack directly into any AI agent. Use this MCP to pull contact details, monitor sales transactions, and audit campaigns conversationally, without ever opening the Ontraport dashboard.

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Ontraport MCP

10 tools available

Cloud-hosted on Vinkius

Need a quick snapshot of your business metrics? You don't have to open up multiple tabs or dig through complex dashboards just to find out who signed up last week or which campaign is underperforming. This MCP lets you talk to your CRM like it's a conversation. Instead of navigating deep into sequence settings, you simply ask your agent for an overview of customer journeys. You can instantly list contacts, check the status of active campaigns, or review recent sales transactions—all through natural language. When you connect this via Vinkius, your AI client handles all the data retrieval and organization. It's pure automation control, giving you a single point of access to run complex business checks instantly.

Core Capabilities

01 — Manage Contact Records

Create new contacts or look up details for existing ones using tools like ``create_contact`` and ``get_contact``.

03 — Track Sales Performance

Get real-time lists of sales transactions and monitor overall revenue performance.

02 — Audit Marketing Campaigns

List active marketing campaigns, sequences, forms, and landing pages to understand the state of your customer funnels.

04 — Review Operational Tasks

List assigned tasks to ensure the team stays on track with operational needs.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/mcp/ontraport — connect your AI agent in three steps.

- 01 Subscribe to this MCP and provide your specific Ontraport App ID and API Key.
- 02 Connect the service to your preferred AI client, like Cursor or Claude.
- 03 Ask your agent a question (e.g., 'What were today's sales transactions?') and receive structured data in response.

The bottom line is: you interact with your entire marketing automation business via simple conversation prompts.

Built For

This MCP targets the operational roles that spend too much time context-switching between different platforms. It's for anyone who knows they need data from their CRM but hates logging into 5 separate tabs to check it.

Marketing Manager

Audits active sequences and landing pages, quickly checking if the right campaigns are running before a product launch.

Sales Representative

Looks up specific contact details or checks pending tasks for an account without leaving their primary workspace.

Business Owner

Checks the total list of transactions and campaign status in minutes, not hours.

What Changes When You Connect

- 01 Stop opening multiple dashboards. Instead of manually checking campaign status or running a report, you simply ask your agent to list campaigns, getting the data instantly in conversation.
- 02 Never lose track of who needs what. You can quickly look up contact details using `get_contact` and cross-reference that person's role without logging into any specific tab.

-
- 03** Track revenue streams faster than ever. Need an immediate sales overview? Running a query for `list_transactions` gives you the numbers, totals, and volume right away.
-
- 04** Audit your lead funnel in seconds. Checking both `list_forms` and `list_landing_pages` lets you confirm all capture assets are active and configured correctly.
-
- 05** Keep the team accountable by using `list_tasks`. Get an immediate overview of who owns what, eliminating the need for status update meetings.
-

Real-World Applications

Sales needs a quick revenue snapshot before a call

A sales rep is about to talk to a major client. Instead of having to pull up the CRM and navigate to transactions, they ask their agent to list all recent sales transactions from the last quarter. The AI retrieves the data instantly, giving them immediate talking points.

Business Owner wants a daily operational summary

The owner wakes up and needs to know three things: 1) Are there pending tasks? 2) Did we make sales today? 3) Which campaigns are active? The agent handles all three calls—`list_tasks`, `list_transactions`, and `list_campaigns`—in one conversational response.

Marketing needs to audit compliance for a launch

A marketing manager is preparing a new product launch and has to verify that every necessary element is ready. They use the agent to list all active sequences, check the status of related landing pages, and confirm contact records are up-to-date using `list_contacts`.

Lead Nurturing requires immediate data access

A team member needs to check a prospect's full history. Instead of searching multiple dashboards, they ask the agent to pull details for a specific contact using `get_contact`, instantly seeing their full interaction record.

Patterns to Avoid

Treating it like a simple data dump tool

✗ AVOID

The user asks, 'Give me all the contacts and transactions.' This results in a massive, unreadable spreadsheet that requires manual filtering.

✓ INSTEAD

Instead of dumping everything, ask targeted questions. For example: 'List only active contacts who haven't transacted in 60 days,' or 'Show me the top five revenue-generating transactions from last month.'

Ignoring existing data structures

✗ AVOID

A user tries to manually recreate a sequence flow by listing messages and campaigns, which is overly complex.

✓ INSTEAD

Use the agent to understand the relationship between assets. Ask: 'Which sequences use the 'Welcome' message?' This shows you dependencies without manual cross-referencing.

Overloading the prompt with too many steps

✗ AVOID

The user writes, 'List contacts, then check campaigns, and also list tasks,' making it confusing for the agent.

✓ INSTEAD

Group related checks. Ask: 'Give me a status update on our marketing efforts by checking active sequences and any pending tasks.' This keeps the scope focused.

The Right Fit

Use this MCP if your primary workflow involves cross-referencing data between sales records, campaign assets, and contact histories. It's perfect for operational managers who need rapid status checks on their CRM without deep navigation into the platform's interface. However, don't use this if you are trying to perform complex, multi-stage content *creation* (like drafting entire email campaigns); those tools handle content generation. If your goal is solely internal reporting outside of marketing data—for example, retrieving HR records or inventory levels—you need a different type of connector designed for that specific system.

The Pain of the Dashboard Hop

Right now, checking on your business status means opening Ontraport. You jump to contacts to see leads, switch tabs to campaigns to check funnel health, and then open a third tab for sales transactions just to get one number. It's slow, it's messy, and you spend more time clicking around than actually analyzing.

With this MCP, all that context is available in chat. You ask your agent about the status of active campaigns or list contacts, and it pulls together the data from multiple internal sources into a clean, readable response. It cuts out the dashboard hop entirely.

Ontraport: Getting Data When You Need It

No more manually running reports to compile today's sales figures or having to check multiple spots for a single contact's current task status.

The agent aggregates the data from

`list_transactions` , `get_contact` , and `list_tasks` instantly.

The difference is conversational control. You don't manage dashboards anymore; you just talk to your business data.

Ontraport MCP with 10 Tools

These tools let you manage every aspect of your CRM from contact creation to transaction listing, all through natural language commands.

#	TOOL	DESCRIPTION
01	<code>create_contact</code>	Allows your agent to create a brand new contact record within Ontraport.
02	<code>get_contact</code>	Retrieves all known details for one specific contact by their identifier.
03	<code>list_campaigns</code>	Pulls a list of every marketing campaign currently running in the platform.
04	<code>list_contacts</code>	Generates a comprehensive list of all contacts stored in Ontraport.
05	<code>list_forms</code>	Retrieves details on lead capture forms used across the site.
06	<code>list_landing_pages</code>	Lists all active landing pages designed for specific campaigns.
07	<code>list_messages</code>	Fetches a list of sent email or SMS messages used in sequences.
08	<code>list_sequences</code>	Shows the status and details for automated customer nurturing sequences.
09	<code>list_tasks</code>	Provides an overview of all currently assigned tasks for the team.
10	<code>list_transactions</code>	Generates a list of completed sales transactions, detailing revenue and items sold.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U List the last 5 contacts added to my Ontraport account.

I've retrieved the latest contacts. Here are the 5 most recent additions, including their names, email addresses, and subscription status.

U Check the status of my active marketing campaigns.

You have 3 active campaigns: 'Spring Launch', 'Referral Rewards', and 'Newsletter Funnel'. Would you like detailed performance stats for any of them?

U List all sales transactions from today.

I've fetched the transaction list for today. There were 12 sales processed, totaling \$1,450.00. Would you like a breakdown of the items sold?

Frequently Asked Questions

01 How do I use the Ontraport MCP to get a list of all contacts?

You simply ask your agent to list contacts. The tool handles this by calling `list_contacts` and returning the full roster directly in your chat window.

02 Can I use Ontraport MCP to check my sales performance?

Yes, you can. Prompting for today's revenue or last month's totals uses `list_transactions` to pull the necessary financial data and summarize it.

03 Does the Ontraport MCP help me manage my team's tasks?

It does. You can ask for a list of assigned tasks, which utilizes the `list_tasks` tool to keep everyone accountable without opening the task board.

04 What if I need details on one specific contact? Do I use Ontraport MCP?

Yes. You should ask your agent to get the contact using `get_contact`, which pulls all known data points for that single person into your chat.

05 Can this MCP list my marketing forms and pages?

Absolutely. Using `list_forms` and `list_landing_pages` allows you to audit every lead capture asset in one conversational query.
