Personal Digital Legacy Plan MCP

Secure your digital life for your future executors.

Personal Digital Legacy Plan helps you organize digital accounts, designate trusted contacts, and build secure storage plans for sensitive assets. It bridges the gap between your current digital footprint and the people you trust to manage it later, ensuring your instructions are followed exactly as you intended.

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Personal Digital Legacy Plan MCP

4 tools available

Cloud-hosted on Vinkius

You spend your life building a digital footprint, from cloud storage and email to sensitive financial accounts. Most people leave these assets in a state of chaos for their heirs. This MCP gives you a structured way to organize that chaos. You can map out exactly which accounts exist, how they should be accessed, and who has the authority to manage them. Instead of leaving vague instructions, you create a clear, tiered security strategy that matches the sensitivity of each asset. You can also prepare specific briefing packets for your trusted contacts so they aren't left guessing during a difficult time. It's about moving from digital clutter to a deliberate, organized estate plan that respects your privacy and your specific wishes.

Core Capabilities

01 — Asset Mapping

Your agent uses this to organize accounts into a tiered security framework.

02 — Access Instruction Generation

Your agent creates specific rules for how executors should handle individual accounts.

03 — Contact Briefing

Your agent prepares information packets for the people you trust with your digital estate.

04 — Maintenance Scheduling

Your agent generates checklists to ensure your plan doesn't become outdated.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/personal-digital-legacy-plan — connect your AI agent in three steps.

- 01 Connect your AI client to the Personal Digital Legacy Plan MCP via Vinkius.
- 02 Tell your agent to list or organize your digital accounts.
- 03 Use the tools to create storage plans and instruction registers.
- 04 Generate briefing packets for your designated contacts.
- 05 Set up an annual review schedule to keep everything current.

You connect your preferred AI client to the hosted MCP and start organizing your data.

Built For

This MCP is for individuals looking to prevent digital asset loss and ensure privacy after they are gone.

Estate Planners

Use the agent to help clients organize digital components of their broader estate.

Privacy-Conscious Individuals

Use the agent to manage least-disclosure access for sensitive digital accounts.

Digital Asset Owners

Use the agent to create clear instructions for executors and trusted contacts.

What Changes When You Connect

- 01 Reduces ambiguity for executors through structured account registers.
- 02 Protects sensitive data using tiered security strategies.

-
- 03** Ensures plan accuracy with automated annual review agendas.
-
- 04** Simplifies handoffs to trusted contacts with curated briefing packets.
-

Real-World Applications

Digital Estate Organization

Group all your cloud storage, email, and social media accounts into one organized framework.

Security Tiering

Assign different levels of security to different types of digital assets.

Executor Preparation

Create a clear set of instructions so your executor knows exactly how to access necessary accounts.

Annual Plan Audits

Run a yearly check to make sure your trusted contacts and account lists are still correct.

Patterns to Avoid

Vague account lists

❌ AVOID

You tell your executor to just look for any cloud storage accounts that might exist. This leaves them hunting through endless logins without direction.

✓ INSTEAD

Use ``generate_account_instruction_register`` to build a structured list that defines exactly which accounts exist and how they should be handled.

One size fits all security

❌ AVOID

You treat your social media profiles and your primary financial accounts with the exact same level of access priority. This exposes sensitive data unnecessarily.

✓ INSTEAD

Run ``create_secure_storage_plan`` to organize your assets into a tiered security framework based on how sensitive they actually are.

Setting and forgetting

❌ AVOID

You create a digital plan today and assume it will still be accurate five years from now. Accounts change, passwords rotate, and contacts move.

✓ INSTEAD

Keep your plan current by using ``generate_annual_review_agenda`` to trigger regular audits of your digital footprint.

The Right Fit

Connect this MCP if you want to move from digital clutter to a deliberate estate plan. If you don't care about how your heirs access your cloud storage or financial accounts, you don't need this. The decision rests on whether you want a structured, tiered security strategy for your digital life.

4 Tools for Digital Estate Management

These tools help you map, document, and maintain a structured plan for your digital assets and access instructions.

#	TOOL	DESCRIPTION
01	create_secure_storage_plan	This tool maps your digital assets to a tiered security strategy based on their sensitivity.
02	generate_account_instruction_register	This tool produces a structured list of your digital accounts and the specific access rules for each.
03	generate_annual_review_agenda	This tool creates a checklist and schedule to keep your legacy plan updated and current.
04	generate_trusted_contact_briefing	This tool builds a curated information packet for a specific person you have designated as a trusted contact.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U Generate an instruction register for my Gmail and iCloud accounts.

Gmail (Type: Email, Instruction: Provide access to executor via recovery email), iCloud (Type: Cloud Storage, Instruction: Provide access to executor via master password).

U Create a secure storage plan for my digital documents and master passwords.

Master Passwords are assigned to Vault Storage, and Digital Documents are assigned to Vault Storage.

U What is the next step for my annual review if I last reviewed my plan on 2023-01-01?

Your next scheduled review is 2024-01-01. Tasks include verifying your account list and validating your current trusted contacts.

Frequently Asked Questions

01 How does this MCP handle my sensitive data?

The MCP uses a tiered security strategy to map assets to specific storage plans, following the principle of least-disclosure.

02 Which AI clients can I use with this MCP?

You can use this MCP with any compatible client, including Claude, Cursor, Windsurf, and VS Code.

03 Can I use this to manage my passwords?

The MCP helps you create a secure storage plan that maps assets like master passwords to specific vault storage.

04 How do I ensure my plan stays up to date?

You can use the annual review tool to generate a checklist and schedule to keep your legacy plan current.

05 What is a trusted contact briefing?

It is a curated information packet created for a specific individual you have designated to handle your digital affairs.

06 How does this tool protect my privacy?

The server follows the Least-Disclosure principle. For example, when using ``generate_trusted_contact_briefing`` with a minimal scope, contacts only receive location-based information rather than sensitive credentials.

07 Can I manage my digital assets for my heirs?

Yes. You can use ``generate_account_instruction_register`` to create a structured list of accounts and specific instructions for your executors.

08 How often should I update my legacy plan?

You can use ``generate_annual_review_agenda`` to produce a customized checklist and schedule to ensure your plan remains current and your trusted contacts are still valid.

Go Live in 60 Seconds

Get your connection token from cloud.vinkius.com, then paste the endpoint URL into any MCP-compatible client.

YOUR MCP ENDPOINT
