

MCP SERVER

NO CODE

CLOUD HOSTED

Pinterest MCP

Manage your visual boards and pins conversationally.

Pinterest MCP manages your entire visual discovery ecosystem. It lets your agent audit boards and pins, create new content, and delete assets using natural language prompts. Stop manually clicking through dashboards to organize or track creative ideas; just talk to it.

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Pinterest MCP

9 tools available

Cloud-hosted on Vinkius

Managing Pinterest used to mean jumping between different views—checking board metadata one tab at a time, then going back to find the right pin ID to update. This MCP lets your AI agent handle that entire process conversationally. You can ask it to list every board you own and get detailed information instantly. Your agent doesn't just read data; it acts as a creative assistant, drafting new pins with titles and links or deleting old boards that no longer fit your brand aesthetic. This level of visual governance means you spend less time organizing and more time creating. By connecting Pinterest to Vinkius, your AI client gets access to a powerful catalog, turning your entire collection of visual assets into a manageable data layer for any workflow.

Core Capabilities

01 — Audit and Manage Boards

List all existing boards or retrieve detailed metadata for a specific board.

03 — Maintain Visual Libraries

Filter and query all your saved pins for a specific board to keep track of visual categorization.

05 — Check Account Status

Get detailed information about the authenticated user account for organizational control.

02 — Create and Update Pins

Draft, create, and save new pins with titles, descriptions, and destination links directly from your chat window.

04 — Delete Outdated Content

Automatically remove boards or individual pins that no longer serve your strategy.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/mcp/pinterest — connect your AI agent in three steps.

- 01 Subscribe to this MCP and enter your Pinterest Access Token.
- 02 Connect the MCP to your preferred AI client (Claude, Cursor, or any compatible agent).
- 03 Ask your agent a natural language command, like 'List all my boards' or 'Create a new pin for Summer travel.' The agent handles the rest.

The bottom line is that you interact with Pinterest using plain English commands instead of clicking through complex dashboards.

Built For

This MCP is built for content teams and operations leads who manage visual assets. If your job involves organizing large quantities of images, maintaining brand consistency across multiple boards, or keeping track of product links, you need this.

Content Curator

Needs to perform rapid audits of hundreds of pins and organize them into new thematic boards without manually viewing each one.

Digital Marketer

Requires the ability to verify that newly launched products have been correctly pinned and linked across multiple campaign boards for maximum traffic.

Creative Operations Lead

Automates visual data querying to ensure cross-functional creative teams stay organized and assets are properly categorized.

What Changes When You Connect

- 01 Stop auditing manually. Instead of clicking into every board to see what's there, you simply ask your agent to list all boards or query specific pins using `list_boards` or `list_pins`. It gets the metadata instantly.

-
- 02 Never lose track of a campaign asset again. If you need to check if new product images are correctly pinned and linked for marketing, you just prompt for that information instead of navigating deep into the dashboard.

 - 03 Keep your content clean. When a board or pin no longer serves your brand strategy, you tell your agent to delete it using `delete_board` or `delete_pin`, automating visual governance.

 - 04 Build new concepts fast. You can draft and save entirely new ideas immediately by asking the system to use `create_pin` with specific titles and links, all without leaving your current workflow.

 - 05 Control the whole account. Need a quick overview of who owns the account or what assets are available? Use tools like `get_me` to maintain strict organizational control over user data.
-

Real-World Applications

The Quarterly Audit

A content curator needs to know which boards haven't been updated in six months. Instead of manually clicking into dozens of folders, they ask their agent to run a query across all boards and pin libraries, identifying the stale content for review.

Board Restructuring

An operations lead realizes two related boards are redundant. They ask the agent to list all assets from both and then use `delete_board` on the old structure, consolidating content into one master board.

Product Launch Coordination

A marketing manager needs to ensure 50 new product pins are live with correct links. They use the agent's `create_pin` tool in a batch workflow, confirming each pin ID was recorded instantly.

Patterns to Avoid

Manual Data Collection

✗ AVOID

The user has to navigate through boards one by one, copying titles and links into a spreadsheet to audit assets.

✓ INSTEAD

Use the agent's ``list_boards`` tool first; then use ``get_board`` for specific metadata. This gathers all necessary data in bulk without manual clicking.

Guessing Pin Details

✗ AVOID

A user remembers a pin but can't recall the exact ID or title, so they spend time searching through multiple boards.

✓ INSTEAD

Instead, ask your agent to ``list_pins`` and filter by board name. If that fails, use ``get_pin`` once you have a partial identifier.

Ignoring Account Scope

✗ AVOID

Attempting to manage assets without knowing the current user context, leading to permission errors or incomplete data sets.

✓ INSTEAD

Always start by running ``get_me`` through your agent. This validates the connection and confirms the scope of account access before making changes.

The Right Fit

Use this MCP if your job revolves around visual inventory management, content auditing, or maintaining a vast collection of organized ideas. If you frequently need to list all boards, audit pin metadata, or delete outdated assets based on prompts—this is exactly what you need. Don't use it if you just want to quickly view one board for personal inspiration; those quick views don't require the power of an agent. Instead, if you only need to write a single post and share it manually once, stick with standard web tools. But if the process involves discovery, categorization, or mass updates, this is your solution.

The Headache of Visual Asset Tracking

Think about how much time you spend today just trying to map out your visual ideas. You open Pinterest, click into a board for 'Summer Recipes,' then have to switch tabs to check the related pins under 'Italy Travel.' To audit everything, you're copying titles and links into a spreadsheet, running back and forth between multiple views until you finally have a messy list.

With this MCP, your agent takes over that manual cross-referencing. You just tell it what you need—for example, 'Show me all pins from the 'Summer Recipes' board.' The data appears in plain text, organized by the tool, letting you move straight to analysis instead of tedious collection.

Pinterest MCP: Board and Pin Management

The biggest time sink is figuring out what's missing. You have boards full of assets, but do you know which pins are linked to the right products? Do you need to delete that old board about 'Holiday Decor 2019'? These questions require logging into multiple sections and manually checking permissions.

Now, your agent handles governance. You can ask it to list all boards or even use `delete_board` if a section is obsolete. The entire process goes from complex dashboard navigation to a simple conversation with the MCP.

Pinterest: 9 Tools for Visual Discovery

These nine tools allow you to perform every core action on Pinterest—from listing boards to creating pins—all managed by your AI client.

#	TOOL	DESCRIPTION
01	<code>create_board</code>	Creates a brand new board on your account.
02	<code>create_pin</code>	Generates and saves a new pin with specific titles, descriptions, and links.
03	<code>delete_board</code>	Permanently removes an entire board from your account.
04	<code>delete_pin</code>	Removes a specific pin you want to take down.
05	<code>get_board</code>	Retrieves full details about one particular board by its ID.
06	<code>get_me</code>	Pulls detailed information about your connected user account.
07	<code>list_boards</code>	Lists every single board associated with your account.
08	<code>list_pins</code>	Shows a list of pins, with the option to filter them by a specific board ID.
09	<code>get_pin</code>	Retrieves all detailed information for one single pin.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U List all my Pinterest boards.

I've retrieved your boards. You have 5 active boards, including 'Home Decor' and 'Travel Goals'. Which one would you like to audit for pins?

U Create a new pin in 'Travel Goals' titled 'Summer in Italy'.

Pin created! 'Summer in Italy' is now live on your 'Travel Goals' board. I've recorded the pin ID for your audit.

U Show me the pins in my 'Home Decor' board.

I've found 12 pins in that board. Notable entries include 'Modern Kitchen' and 'Minimalist Living Room'. Would you like the links for any of them?

Frequently Asked Questions

01 How do I check every board on Pinterest using the Pinterest MCP?

You simply ask your agent to run `list_boards`. This function retrieves all boards associated with your account, giving you a comprehensive overview instantly.

02 Can I use the Pinterest MCP to create new content?

Yes. You can draft and save entirely new ideas by having your agent run `create_pin`, allowing you to include titles, descriptions, and destination links in a single command.

03 What if I want to delete old boards using the Pinterest MCP?

To remove outdated content, ask the agent to use the `delete_board` tool. It handles the permanent deletion of entire sections from your account structure.

04 Does the Pinterest MCP only let me read data?

No. The MCP is fully operational; you can create pins using `create_pin`, and you can even delete boards or individual pins to maintain visual governance.

05 How do I get details on a specific pin? Do I need the ID?

Yes, ideally. You should ask your agent to use `get_pin` after providing the specific Pin ID for full detail retrieval.
