CLOUD HOSTED

Public Art Proposal Planner MCP

Turn messy art call briefs into winning submission strategies.

Public Art Proposal Planner MCP helps artists and curators bridge the gap between a creative idea and the heavy administrative requirements of public commissions. It breaks down complex call briefs into actionable checklists, technical asset maps, and chronological timelines. You can use it within your AI client to ensure every technical drawing, stability report, and compliance rule is accounted for before you hit submit.

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Public Art Proposal Planner MCP

5 tools available

Cloud-hosted on Vinkius

Public commissions demand more than just a good idea. They require strict adherence to technical specs, specific documentation, and rigid deadlines. This MCP acts as your strategic planning partner to handle the administrative heavy lifting. Instead of digging through a fifty page PDF to find a specific requirement, you can feed the brief to your AI agent and have it instantly map out what you need. It helps you identify which technical drawings or engineering reports are missing and organizes how you and your collaborators need to work to meet the deadline. You'll move from a vague concept to a structured, compliant submission plan without missing the small details that often disqualify great projects.

Core Capabilities

01 — Strategic Planning

Your agent uses this to align your creative vision with the jury's specific evaluation metrics.

02 — Asset Mapping

The AI identifies missing technical documentation or models required by the commission.

03 — Workflow Organization

It defines specific roles and responsibilities for your team or collaborators.

04 — Timeline Construction

The agent builds a step by step sequence of actions to meet the submission deadline.

05 — Compliance Validation

It checks your final proposal against the call brief to prevent rule violations.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/public-art-proposal-planner — connect your AI agent in three steps.

- 01 Connect the MCP to Claude, Cursor, or Windsurf via Vinkius.
- 02 Upload or paste the text of your art call brief into your AI client.
- 03 Ask your agent to generate a strategy or a list of required assets.
- 04 Use the workflow and timeline tools to organize your team and schedule.
- 05 Run a final compliance check to verify your proposal meets all rules.

Connect the MCP to your preferred AI client and start planning your next commission.

Built For

This MCP is built for professionals managing the administrative side of public art commissions.

Fine Artists

They hand off call briefs to the AI to organize their technical requirements and deadlines.

Curators

They use the tool to manage collaborator workflows and ensure project compliance.

Project Managers

They rely on the tool to build submission sequences and track necessary assets.

What Changes When You Connect

- 01 Reduces the risk of disqualification by checking all compliance rules.
- 02 Identifies missing technical assets like engineering reports early in the process.

03 Creates clear timelines to prevent last minute rushes.

04 Organizes collaborator tasks to keep teams on schedule.

Real-World Applications

New Commission Research

Feed a new call brief to the AI to immediately see if you have the necessary assets to apply.

Team Coordination

Use the workflow tool to assign specific documentation tasks to engineers or fabricators.

Final Submission Audit

Run a compliance check on your completed proposal to catch errors before sending it to the jury.

Deadline Management

Generate a sequence of actions to ensure all technical drawings and models are ready on time.

Patterns to Avoid

Ignoring the call brief details

❌ AVOID

You start designing a massive sculpture without checking if the site can actually support the weight or if the dimensions fit the RFP.

✓ INSTEAD

Feed the full brief to your agent first. Use the `map_evidence_and_assets_tool` to identify exactly which technical drawings or engineering reports you need to gather before you start designing.

Relying on manual deadline tracking

❌ AVOID

You try to keep track of every fabrication milestone and shipping date in a messy spreadsheet that everyone forgets to update.

✓ INSTEAD

Let the agent build a structured timeline. Use the `construct_submission_sequence_tool` to create a chronological list of every action required to hit your deadline.

Skipping the final rule check

❌ AVOID

You submit a beautiful proposal only to find out the jury disqualifies it because you missed a specific documentation requirement.

✓ INSTEAD

Always run a final check before hitting send. Use the `compile_compliance_checklist_tool` to validate your proposal against the call brief rules.

The Right Fit

Connect this MCP if you manage public commissions and need to align creative work with rigid technical requirements. If you only handle small, informal private commissions with no strict documentation rules, you don't need this. The deciding factor is whether your project's success depends on meeting specific, written compliance metrics.

5 Specialized Tools for Public Art Proposal Planning

These tools handle the administrative heavy lifting, from mapping technical assets to running final compliance audits.

#	TOOL	DESCRIPTION
01	compile_compliance_checklist_tool	This tool runs a final validation check to ensure your proposal meets every rule in the call brief.
02	construct_submission_sequence_tool	Use this to build a chronological timeline of every action required before the submission deadline.
03	generate_proposal_strategy_tool	This tool creates a high level strategic approach tailored to the specific art call.
04	map_evidence_and_assets_tool	It identifies the exact documentation, 3D models, or technical drawings you need to gather.
05	organize_collaborator_workflow_tool	This tool defines specific roles and commitments for your partners and collaborators.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U I have a call brief for a permanent park sculpture. How should I approach the strategy?

To develop your strategy, please provide the full text of the call brief, the description of the park site, and the specific evaluation criteria used by the jury.

U What assets do I need for a submission that requires a site photo, a 3D model, and a stability report?

You will need to provide a high-resolution site photo, a digital 3D model file, and a technical stability report signed by a licensed engineer.

U Check if my proposal is compliant with these requirements: [List of requirements].

Your proposal is compliant with all listed requirements, though you should ensure the technical drawings are provided in the specific requested format.

Frequently Asked Questions

01 What AI clients can I use with this MCP?

You can use this MCP with any compatible client, including Claude, Cursor, Windsurf, and VS Code.

02 Do I need to host the MCP myself?

No, Vinkius hosts and manages the MCP for you. You just connect your client and it is ready to use.

03 Can this tool help with technical requirements?

Yes, it can identify required documentation, 3D models, and technical drawings needed for a specific submission.

04 How does it help with compliance?

It provides a validation tool that checks your proposal against the rules provided in the call brief.

05 Is this for individual artists or large teams?

It works for both. It can manage individual task lists or organize workflows for multiple collaborators.

06 How can I ensure my proposal meets all technical requirements?

You can use the ``map_evidence_and_assets`` tool to identify every required document and the ``compile_compliance_checklist`` tool to verify your final submission against the original call brief. Tools available: ``generate_proposal_strategy_tool``, ``map_evidence_and_assets_tool``, ``organize_collaborator_workflow_tool``.

07 Can this tool help me manage my engineering partners?

Yes. The ``organize_collaborator_workflow`` tool allows you to define specific roles and deliverables for partners like structural engineers or fabricators based on the call requirements.

08 How do I avoid missing the submission deadline?

Use the ``construct_submission_sequence`` tool. It works backward from your deadlines to create a task order and identify the critical path for your project.
