

MCP SERVER

NO CODE

CLOUD HOSTED

Remote MCP

Global Payroll and HR Compliance, Automated.

The Remote MCP connects your AI agent directly to global payroll and HR infrastructure, managing compliance, benefits, and employee records across 60+ countries. Use it to automate international hiring, monitor expenses, track time off, and ensure accurate paychecks for employees anywhere in the world.

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Remote MCP

11 tools available

Cloud-hosted on Vinkius

Need to manage a workforce that spans multiple continents? This MCP connects your AI agent to Remote's powerful platform, handling global payroll and compliance so you don't have to juggle dozens of country-specific HR portals. You can programmatically gather everything from company metadata to individual employee profiles across 150+ countries. It lets you build a single source of truth for international operations.

Using this connector through Vinkius, your agent handles the complexity. Need to onboard someone in Brazil? Just ask it. Need to check if an invoice is paid for Q3 payroll cycles? Ask that too. The system can list all supported countries, pull detailed employee records, and even compile a real-time overview of hiring trends or pending time off requests. It moves international HR management from tedious data entry into natural conversation.

Core Capabilities

01 — Check Global Company Status

Retrieve metadata on all registered company entities to verify their operational status and details.

02 — Manage Employee Records

Create new employee profiles or pull full records for any global worker, including contractors.

03 — Track Payroll Finances

Access company and payroll invoices to monitor payment status across all jurisdictions.

04 — Monitor Global Workforce Data

List and summarize current employees, contractors, expenses, or time-off requests for a given entity.

05 — Verify International Compliance Scope

Get a comprehensive list of all countries supported by the platform for global expansion planning.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/mcp/remote — connect your AI agent in three steps.

- 01 Subscribe to this MCP and provide your Remote API Key within your developer settings.
- 02 Your AI client authenticates with the connector, establishing a secure link to the Remote platform's data layer.
- 03 You issue a natural language command (e.g., 'List all employees in Germany'), and the agent executes the necessary tool calls to pull the specific data.

The bottom line is you get an AI agent that talks directly to your global HR system, eliminating manual logins and dashboard clicking.

Built For

Global Operations Managers, Finance Directors, and dedicated HR Specialists. If your job involves paying people in more than one country or managing hiring across different time zones, this is for you. Stop compiling data from half a dozen regional portals just to generate a single monthly report.

Global HR Manager

Uses the MCP to automate new hire onboarding by creating employee records and checking international compliance requirements.

Finance Director

Runs payroll audits by listing all invoices and tracking expenses to ensure every payment is correctly accounted for.

Operations Lead

Manages workforce capacity by pulling reports on time off and available contractors across various regions.

What Changes When You Connect

- 01 Stop guessing about global compliance. Use `list_supported_countries` to confirm your hiring options before expanding into a new market.

-
- 02** Never miss an invoice payment again. The MCP lets you access `list_invoices` and `get_invoice_details` instantly, giving finance real-time cash flow visibility.
-
- 03** Onboarding is faster than paper. Instead of manual forms, use `create_employee` to instantly generate full worker profiles for new hires anywhere in the world.
-
- 04** Get a clear picture of your people. By calling `list_employees` or `list_contractors`, you get an accurate count and status update on your entire international workforce.
-
- 05** Manage time off requests without emailing managers. The MCP processes `list_timeoff` reports to identify upcoming staffing gaps instantly.
-

Real-World Applications

Quarterly Payroll Audit

A finance analyst needs to reconcile Q3 payments across five different countries. They ask their agent to pull all relevant data by calling `list_invoices` and `get_invoice_details` for each company, guaranteeing nothing is missed.

Workforce Capacity Check

An HR lead needs to know if their team can handle a major project launch. They ask the agent to summarize current staff and use `list_timeoff`, immediately seeing which employees are out next month.

Hiring in a New Market

An operations manager needs to expand into Vietnam. Instead of contacting three different legal firms, they query the MCP using `list_supported_countries` first, confirming compliance capacity before starting the hire process via `create_employee`.

Contractor Verification

A department head suspects an internal contractor is misclassified. They run reports using `list_contractors` and get the full profile via `get_employee` to verify their legal standing and payment details.

Patterns to Avoid

Using spreadsheets for HR data

X AVOID

Copying employee status from a company portal into Excel, then manually tracking time off in a separate Google Sheet. This inevitably leads to discrepancies when salaries change.

✓ INSTEAD

Let your agent use `list_employees` and `list_timeoff` together. The MCP pulls the live, single source of truth directly from Remote, keeping all data accurate.

Checking payroll invoices manually

X AVOID

Having to log into the accounting system, then the HR portal, then the specific country's compliance site just to find one payment detail.

✓ INSTEAD

Use `list_invoices` and `get_invoice_details`. The MCP gathers all necessary financial proof in a single workflow run.

Forgetting contractor status

X AVOID

Treating every worker like an employee, forgetting that contractors have different tax implications which can result in massive compliance fines.

✓ INSTEAD

Always use `list_contractors` first. This ensures your agent correctly pulls the limited scope of data required for non-employee workers.

The Right Fit

Use this MCP if managing global payroll, benefits, and employment contracts is core to your business. Specifically, if you need to combine employee roster status (`list_employees`) with financial tracking (`list_invoices`) or compliance scope (`list_supported_countries`), this connector is essential. Don't use it if your team only operates in a single country using simple payroll software; those local systems might suffice. If your main pain point is just managing internal project tasks, you might only need an expense tracker—but for comprehensive international HR and finance, this MCP is the right fit.

The headache of running payroll across different countries.

Right now, global HR means logging into a dozen systems. You check Country A's portal for time off, then log into System B to get the employee roster, and finally hop over to accounting software C just to find the payment status. It's constant copy-pasting, cross-referencing dates, and praying you don't miss a compliance requirement.

With this MCP, your agent handles that entire process through natural language. You simply ask for a report on pending time off or list all contractors in Portugal, and the data comes back clean, compiled from multiple sources automatically.

List_employees: Getting an instant view of your global workforce.

Before this MCP, getting a full roster meant running separate reports for each company entity and then manually merging those CSV files. You'd spend hours just verifying that everyone was accounted for in the right place.

Now, you call list_employees, and your agent delivers a single, unified view of every worker's status, letting you focus on strategy instead of spreadsheet cleanup.

Remote MCP: 11 Tools for Global Operations

These eleven tools let your AI agent handle every aspect of international HR and finance—from listing all countries to creating employee records.

#	TOOL	DESCRIPTION
01	<code>list_contractors</code>	Retrieves a list of all people classified as contractors within your network.
02	<code>get_employee</code>	Pulls the complete, up-to-date record for a single worker by their ID.
03	<code>get_invoice_details</code>	Gets full details on a specific invoice number to check payment terms and amounts.
04	<code>list_companies</code>	Generates a list of all company entities you have registered with the platform.
05	<code>create_employee</code>	Adds a brand new employee profile into the system using specific data points.
06	<code>get_company_details</code>	Retrieves specific background and operational details for one of your registered company entities.
07	<code>list_invoices</code>	Generates a list of all financial invoices issued to or from your companies.
08	<code>list_timeoff</code>	Retrieves reports on pending and approved time-off requests across the workforce.
09	<code>list_supported_countries</code>	Shows every country where the platform can currently handle payroll and employment compliance.
10	<code>list_employees</code>	Lists all employees associated with a particular company entity.
11	<code>list_expenses</code>	Pulls reports on expenses submitted by employees for reimbursement.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U List all active companies in my Remote account.

I've retrieved your companies. You have 3 active entities, including 'Vinkius Global' and 'Tech Pilots LLC'. Which one would you like to see employees for?

U Show me all employees across all countries with their contract types and compensation details.

47 employees across 12 countries. By region: Americas (18), Europe (16), APAC (13). Contract types: Full-time (38), Part-time (5), Contractor (4). Top countries: US (12), UK (8), Germany (6), Brazil (5), India (4). Average salary: \$85,200. Total monthly payroll: \$334,000. 3 employees have pending onboarding in Portugal, Japan, and Canada. 2 contract renewals due this month. Benefits utilization: health insurance 94%, equipment allowance 78%.

U List all pending time-off requests that need manager approval this week.

8 pending time-off requests. Sarah Chen (Germany): 5 days vacation Jun 2-6, 18 days remaining. James Park (US): 3 days personal May 26-28. Lisa Wang (Brazil): 2 days sick leave May 19-20. Alex Rivera (UK): 10 days vacation Jun 16-27 (team coverage confirmed). 4 additional requests from India (2), Canada (1), Japan (1). No conflicts detected with current project deadlines. 2 requests overlap with the sprint planning week, flagged for review.

Frequently Asked Questions

01 How do I check if Remote supports my country using the Remote MCP?

You use `list_supported_countries` to see a definitive list of all countries supported by the platform. This is crucial for knowing where you can legally hire next.

02 Can I find out how many active employees I have using the Remote MCP?

Yes, your agent uses `list_employees` to pull a complete count and detailed status of all current staff members associated with your company entity.

03 What if I need to add a new employee record manually? Which tool should I use in the Remote MCP?

You call `create_employee`. This function allows you to pass structured data, ensuring that every field—from job title to start date—is entered correctly on the first try.

04 How does the Remote MCP help with payroll payments?

The MCP provides tools like `list_invoices` and `get_invoice_details`. These let you track payment cycles, monitor invoice status, and confirm when global paychecks were processed.

05 How do I get my Remote API Key?

Log in to your Remote account, navigate to the **Developer** or **API Keys** section in your dashboard, and generate a new key for your integration.

06 Which countries are supported?

Remote supports hiring and payroll in over 150 countries. You can use the `'list_supported_countries'` tool to see the full list in real-time.

07 Can I add employees programmatically?

Yes, the `'create_employee'` tool allows you to initialize new records for international hires directly from your AI agent, including job titles and locales.
