MCP SERVER | NO CODE | CLOUD HOSTED

SEC EDGAR Financials MCP

Benchmark metrics and extract GAAP data instantly.

SEC EDGAR Financials provides immediate access to raw XBRL data from U.S. public company filings. Extract key financials like revenue, net income, and total assets for any listed corporation. You can also compare these metrics across entire industries using industry-wide comparison frames.

A+ Quality Score 100/100

SCAN TO VIEW

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

> *The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.*
>
> — Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256	Ed25519	24h TTL	V8 Isolate
Encryption at rest	PKI vault signatures	Ephemeral session keys	Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

MCP ENDPOINT

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

06 — Honeytoken Trap System

Phantom credentials are injected into isolated environments. If a honeytoken is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1) Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

SEC EDGAR Financials — Revenue, Income, Assets, EPS & Industry Comparison MCP

4 tools available
Cloud-hosted on Vinkius

When you need hard financial numbers—the kind used by professional analysts—you don't want to sift through endless PDFs. This MCP pulls structured data directly from the SEC EDGAR database, giving your agent a clear view of what big companies report. You can pull key metrics for a specific company using `get_key_financials`, or you can drill down to isolate one single US-GAAP concept like Research and Development Expense with `get_financial_metric`. The real power is comparing whole groups; use the industry comparison tool to benchmark revenue across an entire sector. If you need everything, the full data dump is available via `get_all_company_facts`. Connecting this MCP through Vinkius gives your AI client a critical edge in market intelligence, allowing it to process and compare metrics that used to take days of manual work.

Core Capabilities

01 — Extract Key Company Metrics

Instantly pull the most recent five reported values for crucial figures like revenue, net income, assets, or EPS.

02 — Query Specific GAAP Concepts

Target and retrieve historical data for any defined US-GAAP financial concept, such as long-term debt or R&D expenses.

03 — Retrieve Raw Financial Data Dump

Access the complete, comprehensive dataset containing hundreds of XBRL facts across multiple years for deep analysis.

04 — Benchmark Industry Performance

Compare a specific financial metric (like total revenue) across every company within an entire industry sector.

One Click on Vinkius — From Prompt to Execution

Available at **vinkius.com/mcp/sec-edgar-financials-revenue-income-assets-eps-industry-comparison** — connect your AI agent in three steps.

01 You tell your AI client which company and what metrics you need, or if you want to compare entire industries.

02 The MCP uses the SEC filing structure to pull the correct XBRL data points based on US-GAAP standards.

03 Your agent receives structured, clean data that includes historical periods and comparison frames, ready for analysis.

The bottom line is, you get clean, standardized financial numbers without ever opening a PDF or running an API call yourself.

Built For

Financial analysts who spend hours cross-referencing GAAP concepts in quarterly filings. Investment bankers needing immediate comparative data for pitch decks. Corporate strategy teams building competitive benchmarks.

Financial Analyst

They use the MCP to quickly pull `get_key_financials` for 20 competitors, then run an industry comparison using `get_industry_comparison` to spot outliers in revenue trends.

Investment Banker

When building a comparable company analysis (Comps), they query specific metrics with `get_financial_metric`—like Cash and Cash Equivalents—to validate valuation assumptions fast.

Corporate Strategy Manager

They use the raw data dump from `get_all_company_facts` to model long-term historical trends for assets or liabilities, informing major investment decisions.

What Changes When You Connect

01 Speed up comps analysis. Instead of manually checking multiple quarters, use `get_key_financials` to pull the last five reported values for critical metrics like revenue or net income in seconds.

02 Target difficult concepts easily. Need to know a company's exact long-term debt figure? Use `get_financial_metric` to query specific US-GAAP concepts, bypassing generalized search results.

03 Run industry benchmarks instantly. Don’t waste time creating pivot tables; use the comparison tool to see how multiple companies measure up on total assets for CY2024.

04 Access maximum detail. When quick summaries aren't enough, `get_all_company_facts` gives you a raw data dump of hundreds of XBRL concepts across years for advanced modeling.

05 Eliminate ambiguity. The tool is built on official SEC EDGAR filings and US-GAAP standards, ensuring the numbers are reliable and verifiable.

Real-World Applications

Comparing competitors’ growth trajectory

A financial analyst needs to compare how three tech companies handled their R&D spending over the last four years. Instead of downloading and cross-referencing multiple 10-K filings, they use `get_financial_metric` for 'ResearchAndDevelopmentExpense' across all three firms.

Quick valuation check on a target company

An investment banker needs to verify the latest revenue figures and total assets for a potential acquisition. Using `get_key_financials` provides an immediate, reliable overview of the five most recent reported values.

Identifying industry sector leaders

A strategy manager wants to know which companies in the retail sector generated the highest revenue last year. They use `get_industry_comparison` to filter and rank all firms based on a specific metric for CY2024.

Building custom historical models

A data science team needs every financial number available, not just the key metrics. They leverage `get_all_company_facts` to build comprehensive time-series models using the full XBRL dataset.

Patterns to Avoid

Treating it like a general database query

✗ AVOID

Asking the agent, 'What did Apple make last year?' The AI might return vague text or require multiple follow-up prompts to locate the correct filing period and metric.

✓ INSTEAD

Always specify the intent. Use `get_key_financials` first for a summary view, or use `get_financial_metric` if you need a specific concept like 'NetIncomeLoss' over a defined time frame.

Assuming all data is in one place

✗ AVOID

Expecting the agent to pull revenue from 10-K filings and debt figures from an annual report using only general chat prompts.

✓ INSTEAD

If you need a comparative view, use `get_industry_comparison`. If you need everything available, start with the raw dump via `get_all_company_facts`.

Over-relying on surface-level summaries

✗ AVOID

Accepting only the key metrics and missing crucial historical data points needed for trend analysis.

✓ INSTEAD

When deep history matters, use `get_all_company_facts` to get the full XBRL dataset. This is your source of truth beyond the quick summary.

The Right Fit

Use this MCP if your primary need is structured financial data extracted from official U.S. SEC EDGAR filings, particularly when you must compare metrics across multiple companies or time periods based on US-GAAP standards. You should use it when the difference between a rough estimate and verifiable, historical figures matters—think investment research, competitive intelligence, or academic modeling.

Don't use this if you just need general business information (e.g., 'What is Apple's CEO doing today?'). For that, a standard web search works fine. Also, don't use it if your data comes from private company sources; this MCP only handles public filings. If you need to process unstructured text *about* finances (like news articles), look for an NLP-specific tool instead.

Manually building a competitive landscape is brutal.

Think about the old way: You're building a pitch deck, and you need to compare revenue growth across five major industry players. That means downloading five different 10-Q filings. Then, you open Excel, find 'Revenue,' copy the number for Q4 of each company, paste it into your master spreadsheet, and spend an hour just cleaning up dates and ensuring consistent naming conventions.

With this MCP, that whole process vanishes. You simply ask your agent to compare metrics across industries using `get_industry_comparison`. Your agent pulls the standardized numbers directly from the source filings and gives you a clean comparison table instantly. It's pure data output, zero cleanup required.

Get standardized financial data with get_key_financials.

Before this tool, pulling even the basic five-year revenue trend was a tedious copy/paste job. You'd have to navigate through different filing types (10-K vs 10-Q) and find the right line item every single time.

Now, you use `get_key_financials`. It understands which filings hold the most current data for key items like Net Income or EPS. You get a reliable summary view that’s structured by date, saving you hours of manual document review.

SEC EDGAR Financials — 4 Tools

These tools let you pull key company financials, query specific GAAP concepts, get the full raw data dump, and compare metrics across entire industry groups.

#	TOOL	DESCRIPTION
01	`get_key_financials`	Retrieves the five most recent reported values for core metrics like revenue, net income, and earnings per share.
02	`get_financial_metric`	Fetches historical data for any specific US-GAAP concept, such as Research and Development Expense or Total Liabilities.
03	`get_all_company_facts`	Provides a complete, raw dataset containing hundreds of XBRL facts across multiple years and concepts for deep investigation.
04	`get_industry_comparison`	Compares a single financial metric across all companies within an industry frame for specific reporting periods.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U Get Apple's key financial data — revenue, income, assets, and EPS

📊 **SEC EDGAR Financials: AAPL**

Apple Inc. (CIK: 0000320193)

💰 Revenue (last 5 periods):
Q4 2025: $124.3B
Q3 2025: $85.8B

💵 Net Income (last 5 periods):
Q4 2025: $36.3B
Q3 2025: $21.4B

📈 Earnings Per Share (EPS):
Q4 2025: $2.41

U What is Meta's exact Research and Development Expense?

📊 **US-GAAP Concept: ResearchAndDevelopmentExpense (Meta)**

Meta Platforms, Inc. (CIK: 0001326801)

Reported Values:
FY 2025: $52,130,000,000
FY 2024: $38,485,000,000
FY 2023: $35,338,000,000

U Show me a comparison of Revenue across all companies for CY2024

Industry Frame: Revenues (CY2024)

Top reporting entities for CY2024 by US-GAAP Revenues:
1. Walmart Inc: $648,125,000,000
2. Amazon.com Inc: $574,785,000,000
3. Apple Inc: $383,285,000,000

Frequently Asked Questions

01 **How accurate is the SEC EDGAR Financials—Revenue, Income, Assets, EPS & Industry Comparison MCP?**

The data comes directly from official U.S. Securities and Exchange Commission (SEC) filings using XBRL standards. It's the primary source material for public financial reporting.

02 **Can I use get_industry_comparison to compare metrics across different years?**

Yes, you specify both the metric and the time frame. You can compare Revenue in CY2024 against Revenue in CY2023 using this tool.

03 **What is the difference between get_key_financials and get_all_company_facts?**

Use `get_key_financials` for a curated, easy-to-read summary of the most recent five periods. Use `get_all_company_facts` if you need every single historical data point available in the raw XBRL dump.

04 **Does this MCP cover private companies?**

No, this tool is specifically for U.S. public companies that file their reports with the SEC (EDGAR). It cannot access non-public data.

05 **How do I find a specific GAAP concept using get_financial_metric?**

You input the common name of the US-GAAP concept, such as 'LongTermDebt' or 'CommonStockSharesOutstanding,' and the tool returns its historical values for the requested company.
