Stripe MCP for AI Agents

Manage payments and subscriptions through your Stripe dashboard.

Stripe MCP for AI agents. Manage your entire payment infrastructure—from customer lists and subscription statuses to active balances and invoice history—directly through your AI. It turns your agent into a financial operations assistant that can pull data or execute actions without you switching tabs.

customer-management

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Stripe MCP

13 tools available

Cloud-hosted on Vinkius

Stop jumping between browser tabs to find out why a customer's subscription failed or what's currently sitting in your account balance. This MCP connects your AI agent to your Stripe account, making it possible to handle the heavy lifting of financial data management through a single chat interface. Instead of digging through the dashboard to find a specific invoice, pull hosted payment links, or create new products manually, you can just ask your agent to do it. You'll get a clear picture of your monthly recurring revenue, identify churned users faster, and handle support tickets involving billing issues without ever leaving your primary workspace. You can check if a payment intent was successful, see which products are currently active, and even issue refunds for specific transactions. It's a huge time saver for anyone who needs to keep their head above water while managing a growing business. If you're looking for a way to bring your payment operations into your daily workflow, this is how you do it. You can find this and thousands of other connectors in the Vinkius catalog to get your setup running in minutes.

Core Capabilities

01 — List and create customers

Add new customer profiles or find existing ones using email filters.

03 — Monitor subscriptions

Track active, past-due, and canceled plans in real time.

05 — Manage product listings

Browse or create new products and price tiers in your catalog.

02 — Check account balances

See exactly what's available and pending in every currency.

04 — Pull invoice history

Review open, paid, and overdue documents with hosted payment links.

06 — Process refunds

Issue partial or full refunds for specific payments in cents.

07 — Track payouts and charges

View all incoming money and outgoing disbursements on your account.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/mcp/stripe — connect your AI agent in three steps.

- 01 Subscribe to the Stripe MCP on Vinkius.
- 02 Paste your Stripe Secret Key into your configuration.
- 03 Ask your agent to check your balance or list your customers.

The bottom line is you get a direct line of sight into your Stripe data without manual dashboard navigation.

Built For

This is for the SaaS founder who's tired of manual churn audits, the support lead handling a mountain of billing tickets, and the finance manager who needs to reconcile payments without constant tab-switching.

SaaS Founder

Monitor MRR and churn trends daily to make quick pivot decisions without leaving your workspace.

Customer Support Lead

Quickly pull invoice links and payment statuses to resolve user tickets during live chats.

Finance Manager

Audit payment intents and reconcile balances across multiple currencies for end-of-month reporting.

What Changes When You Connect

- 01 Stop manual dashboard hunting by using `balance_get` to see your real-time funds instantly.
- 02 Handle support tickets faster by pulling invoice links with `invoices_list` during a chat.

-

Real-World Applications

Handling a 'Where's my invoice?' ticket

A support agent asks the AI to find an invoice for a specific customer email using `invoices_list` and shares the link immediately.

Conducting a monthly churn audit

A founder asks the agent to list all past-due subscriptions via `subscriptions_list` to see who needs a follow-up.

Onboarding a new high-value client

An account manager tells the agent to create a new customer profile with `customers_create` and a specific product.

Reconciling end-of-month payouts

A finance lead asks the agent to list all payouts and charges using `payouts_list` and `charges_list` to match bank statements.

Patterns to Avoid

Trying to guess customer IDs

✗ AVOID

Asking the agent to pull data for a customer by guessing a random ID number.

✓ INSTEAD

Use `customers_list` with an email filter to find the correct user profile first before requesting other data.

Manual refund calculation

X AVOID

Doing the math for partial refunds in your head and asking the agent to refund a dollar amount.

✓ INSTEAD

Use `refund_create` with the exact amount in cents to ensure the refund is processed accurately by Stripe.

Mixing up products and prices

X AVOID

Attempting to create a price for a product that hasn't been added to your catalog yet.

✓ INSTEAD

Use `product_create` to establish the item first, then check `prices_list` or create the price tier.

The Right Fit

Use this if you need to query, list, or create records in Stripe (like customers, products, or invoices) using natural language. It's perfect for anyone who wants their AI to see their payment data or perform basic CRUD operations on Stripe objects. Don't use this if you need to perform complex, multi-step logic like complex recurring billing schedules or advanced tax configurations, as those require the full Stripe Dashboard or specialized SDKs.

Stripe MCP for automated payment and subscription management

You're currently jumping between your email, your CRM, and the Stripe dashboard just to see if a customer actually paid their last invoice. You're copy-pasting customer names, checking dates, and hunting for payment links while the customer waits. It's a mess of tabs and high friction.

This MCP changes that by letting you ask your AI agent for the status of any payment directly. You get the invoice link, the payment status, and the customer's delinquency status in one sentence. It turns a three-minute search into a three-second answer.

Stripe MCP for real-time financial data syncing

Setting up new products or handling refund requests usually involves navigating deep menus and worrying about entering the wrong amount in cents. One wrong click on a refund can cause a headache for your finance team.

With this tool, you can create products and issue refunds using plain English commands. Your agent handles the specifics of the Stripe API, so you just tell it what to do and it gets it done. You get accuracy without the menu-diving.

Stripe MCP with 13 tools for payment management

Manage your Stripe products, customers, and invoices using 13 specific tools via your AI agent.

#	TOOL	DESCRIPTION
01	customers_list	Pull a list of your customers, optionally filtering by email address. This helps you find specific user profiles quickly.
02	refunds_list	View a complete history of all refunds issued on your account. Use this to track your refund activity.
03	customers_create	Add a new customer to your Stripe account using their name and email. This automates your onboarding flow.
04	payments_list	Get a list of payment intents including status, amount, and currency. Use it to monitor real-time transactions.
05	subscriptions_list	View all active, past-due, and canceled subscriptions. This is great for identifying churned users.
06	invoices_list	Pull a list of invoices filtered by status like draft, open, or paid. Use it to find specific billing documents.
07	balance_get	Check your current available and pending balances across all currencies. It gives you an instant look at your funds.
08	products_list	Browse all the products currently offered in your Stripe account. Use this to see your current catalog offerings.
09	product_create	Create a new product in your Stripe catalog before setting up prices. This helps you expand your offerings.
10	prices_list	View all price tiers for a specific product in your account. Use this to check your current billing structures.
11	refund_create	Issue a partial or full refund for a specific payment in cents. This allows you to handle customer requests instantly.
12	charges_list	View all charges filtered by a specific customer ID. Use this to audit a single user's payment history.
13	payouts_list	See a list of all payouts from your Stripe account. This helps you reconcile your bank deposits.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U What's my current balance in USD?

Your Stripe balance is currently **\$12,450.80 available** and **\$3,200.00 pending** in USD.

U List all past-due subscriptions.

I found 3 past-due subscriptions. The largest is for Acme Corp (\$299/month, overdue since March 15). Would you like me to pull the associated invoices?

U Create a new customer for Jane Smith at jane@example.com

Customer created: **Jane Smith** (cus_QR7x...). Email: jane@example.com. Ready for invoicing and subscriptions.

Frequently Asked Questions

01 Can the Stripe MCP help me find specific invoices?

Yes, it lets your agent search for invoices based on customer ID or status so you can find paid or overdue documents instantly.

02 Can I use the Stripe MCP to see my account balance?

You can ask your agent for your current balance, and it'll show you both available and pending amounts across different currencies.

03 Does the Stripe MCP support creating new products?

Yes, your agent can create new products and list existing price tiers to help you organize your offerings.

04 Can the Stripe MCP help with customer management?

You can use it to list your customers, search by email, or create new customer profiles for your business.

05 Can I process refunds through the Stripe MCP?

You can use it to issue partial or full refunds for specific payments by telling your agent the amount.

06 Can the Stripe MCP help with subscription tracking?

It can list all your active, past-due, and canceled subscriptions so you can monitor churn easily.
