

MCP SERVER

NO CODE

CLOUD HOSTED

Payment Link Creator MCP

Generate Instant Checkout URLs from Chat

Stripe Payment Link Creator lets your AI client generate unique, secure Stripe Checkout URLs instantly within a conversation. It handles the moment a deal closes—when you need to send an immediate payment link for a negotiated amount and currency. This MCP eliminates friction by giving your agent real-time closing power without granting access to sensitive financial dashboards.

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Stripe Payment Link Creator MCP

1 tools available

Cloud-hosted on Vinkius

When a customer agrees on a price, you don't want to paste a generic pricing page link or force them into a clunky checkout flow. This MCP solves that problem. It provides an immediate, secure way for your AI agent to generate a custom payment link the second a deal is agreed upon—whether it's \$150 for consulting or \$45 for a specific product ticket. Because this connector only generates URLs and nothing else, you maintain total control. Your agent can negotiate the price and then drop the exact, unique Stripe Checkout Session URL directly into the chat window. This surgical approach ensures your AI client has closing power without ever needing to read your payout history or access internal dashboards. Connect it through Vinkius to give any MCP-compatible client this essential one-way funnel.

Core Capabilities

01 — Generate checkout links

The agent can create a unique Stripe Checkout URL using specific product details, an exact dollar amount, and the required currency code.

02 — Handle price negotiation results

It converts conversational agreements (e.g., 'Yes, let's do \$150') into actionable payment URLs instantly.

03 — Ensure secure data isolation

The MCP only writes outbound links; it cannot read any of your Stripe account data or execute refunds.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/mcp/stripe-payment-link-creator — connect your AI agent in three steps.

- 01 You prompt your AI client to generate a payment link, specifying the product name, amount in cents, and currency.
- 02 The MCP executes the `create_stripe_payment_link` tool, communicating these three required parameters to Stripe's API.
- 03 Your agent receives the resulting unique checkout URL and sends it directly back to your customer in the chat.

The bottom line is that you tell your AI what payment link you need, and it delivers a ready-to-use, secure URL for immediate action.

Built For

This MCP is critical for sales teams, consultants, and small businesses whose revenue depends on real-time transactions. Use this if your agent needs to move the conversation from 'agreement' straight to 'payment link,' without ever touching a complex dashboard.

Sales Representative

They use it when closing deals, letting their AI client generate and drop the exact payment link for an agreed-upon service amount.

Consultant/Freelancer

They rely on this to immediately create unique payment links for custom project fees negotiated during a live chat session.

E-commerce Operations Manager

They deploy it to automate the checkout process, ensuring that every product or service sale results in an instantly generated and secure payment URL.

What Changes When You Connect

-
- 01** Close deals faster. Instead of sending a customer to a generic pricing page, your agent uses the `create_stripe_payment_link` tool to generate and deliver an exact payment URL right when the deal is done.

 - 02** Maintain absolute security. Because this MCP only generates links using a 'Push-only' method, your AI client can never read sensitive data like bank account details or payout history.

 - 03** Eliminate workflow friction. You bypass manual steps of copying product codes and amounts into an external dashboard, letting the conversation flow directly to payment.

 - 04** Support multi-currency sales. The tool accepts currency codes (like 'usd' or 'eur'), allowing your AI client to handle international negotiations without switching context.

 - 05** Focus on selling, not systems. You get a direct API connection that requires only your Stripe Secret Key, keeping the integration lightweight and fast.
-

Real-World Applications

A consultant needs to bill for an emergency audit.

The client agrees on a \$1,200 fee. Instead of saying, 'Check your email,' the agent uses `'create_stripe_payment_link'` with the amount and currency code to instantly provide the secure payment URL in the chat.

A small business sells customized merchandise.

The buyer selects a product, and the sales bot needs to finalize the purchase. The agent uses `'create_stripe_payment_link'`, providing the specific product name and the total cost in cents, ensuring the link is accurate.

An agency handles international clients.

The client agrees on a price in Brazilian Reais (BRL). The agent uses `'create_stripe_payment_link'` to ensure the payment URL is correctly formatted with 'brl' as the currency code, avoiding conversion errors.

Patterns to Avoid

Trying to check account status**X AVOID**

Asking your agent to verify if a customer already paid or to read the last three transactions.

✓ INSTEAD

This MCP only generates payment links. To retrieve or view existing financial data, you need an entirely separate, read-only Stripe dashboard connector.

Attempting refunds**X AVOID**

Telling your agent to process a refund for a canceled service.

✓ INSTEAD

This tool is one-way: it only creates new payment links. It has zero capabilities related to issuing refunds or modifying existing transactions.

Using it for inventory checks**X AVOID**

Asking the agent if a product is out of stock before generating a link.

✓ INSTEAD

This MCP handles payments, not inventory. Use an e-commerce management tool or database connector to check stock levels first.

The Right Fit

Use this MCP if your primary need is to move the conversation from 'agreement' directly into a secure payment link. If your workflow requires generating unique checkout URLs based on specific

amounts and currencies, this is the right tool. Don't use it if you need to read any existing Stripe data (like checking customer records or refunds), because this MCP has no read permissions—it only pushes links out. Similarly, don't use it for managing subscription models that require complex billing cycles; those services usually need a more robust, dedicated payment gateway tool. This is purely for the 'deal closed' moment.

The Friction of Manual Payments

When you close a deal manually, the process involves copy-pasting data: jumping to your dashboard, finding the correct product ID, inputting the final negotiated amount into cents, and finally copying the resulting URL back into the chat. It's clunky, slow, and prone to human error.

With this MCP, that entire sequence disappears. Your agent handles the negotiation and then instantly uses the `create_stripe_payment_link` tool to generate a clean, unique payment link right where you're talking to the customer. You just get the final, perfect URL.

Instant Payment Link Generation with `create_stripe_payment_link`

You stop having to manually calculate and verify amounts across multiple systems before sending a payment request. The agent handles the structure, the currency code, and the Stripe API call in one go.

What changes now is speed. You move from 'We'll send you a link later' to 'Here's your link.' It makes the conversation feel complete.

Stripe Payment Link Creator: 1 Tool

Use the tools here to create unique and accurate Stripe Checkout URLs by specifying product details, amounts, and currencies.

#	TOOL	DESCRIPTION
01	<code>create_stripe_payment_link</code>	Generates a unique Stripe Checkout Session URL by requiring the product name, amount (in cents), and currency code.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U Create a payment link for \$45.00 USD for 'Priority Support Ticket'.

I've generated the payment link. You can complete your purchase here:

https://checkout.stripe.com/c/pay/cs_test_...

Frequently Asked Questions

01 Does Stripe Payment Link Creator MCP generate links for recurring subscriptions?

No, this MCP is designed only for one-time checkout sessions. For complex, recurring billing models, you'll need a different payment integration tool.

02 Can I use `create_stripe_payment_link` if the customer pays in Euros?

Yes. You must provide the correct currency code (e.g., 'eur') along with the amount when calling `create_stripe_payment_link``.

03 Is this MCP safe, or can it access my customer list?

It's highly secure. The tool only generates links and has absolutely no ability to read your Stripe dashboard, customer lists, or financial data.

04 What information does `create_stripe_payment_link` need from me?

The `create_stripe_payment_link`` function requires three pieces of information: the product name, the amount in cents (not dollars), and the currency code.

05 Does using Stripe Payment Link Creator MCP cost extra money?

No. This MCP only connects to your existing Stripe account via API calls; it doesn't introduce new fees or require new accounts beyond what you already use with Stripe.

Go Live in 60 Seconds

Get your connection token from cloud.vinkius.com, then paste the endpoint URL into any MCP-compatible client.
