

MCP SERVER

NO CODE

CLOUD HOSTED

Tencent Docs MCP

Control files and data without opening the web browser.

Tencent Docs connects your AI agent directly to a collaborative workspace for managing documents, sheets, and slides. Instead of logging into the web interface and manually clicking through folders, you can ask your AI client to perform complex file operations using natural language. Your agent handles everything from listing all accessible files across multiple folders to pulling specific data ranges from spreadsheets or retrieving the full text content of a document for analysis.

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Tencent Docs MCP

10 tools available

Cloud-hosted on Vinkius

Tencent Docs lets your AI agent handle day-to-day office work that used to require jumping between tabs and copying values. You don't need to know the structure of a folder or remember where a file lives; you just tell your agent what you need done. Your agent can list all documents, create new ones for project kickoffs, or retrieve complex data ranges from sheets instantly. It even monitors who has access to a file and helps coordinate team efforts by listing organization members.

It feels less like using a tool and more like talking to an assistant sitting next to you. Whether you're managing financial models or compiling research reports, the agent acts as your real-time productivity layer. By connecting Tencent Docs through Vinkius, your AI client becomes aware of every document, sheet, and folder in your workspace—all without you ever leaving your chat window. This means complex tasks, like updating specific data points across several sheets while simultaneously finding related documents, become simple conversations.

Core Capabilities

01 — List all files and folders

The agent retrieves a comprehensive list of every document and folder within your entire Tencent Docs account structure.

03 — Access and modify documents

The agent creates entirely new files, deletes outdated ones, or retrieves the full text content of existing documents for review.

02 — Manage spreadsheet data

You can tell the agent to pull specific values from any range in a sheet or update data points across multiple sheets instantly.

04 — Track team collaboration

You can list who has access to a file and view member lists to understand organizational coordination status.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/mcp/tencent-docs — connect your AI agent in three steps.

- 01** Subscribe to this MCP and provide your Tencent Docs Access Token.
- 02** Connect the MCP in your preferred AI client (like Cursor or Claude).
- 03** Ask your agent a natural language question, such as 'List all documents related to Q3 sales' to get results immediately.

The bottom line is that you tell your AI agent what needs to change in your office workspace; it handles the connection and executes the necessary actions across Tencent Docs for you.

Built For

This MCP is essential for project managers, data analysts, and team leads who spend more time manually tracking down files and updating spreadsheets than actually doing deep work. If your day involves jumping between different cloud document platforms to assemble a single report, this is the tool you need.

Project Coordinator

Uses this MCP to list all project folders and check file collaborators when preparing for status meetings.

Data Analyst

Instructs the agent to get spreadsheet data from specific ranges or retrieve full document text content for immediate analysis in their chat client.

Team Lead

Uses this MCP to create new documents, delete old ones, and list organization members when onboarding a new team member or concluding a project phase.

What Changes When You Connect

- 01** Stop manually navigating file paths. Use this MCP to list all your documents or list folders, giving your AI agent a complete map of everything you own.

-
- 02** Data extraction is instant. Instead of clicking into a sheet just to copy values, use `get_sheet_data` and have the numbers delivered directly to your chat window for immediate processing.
-
- 03** Need to track who's working on what? Use `list_collaborators` to see exactly which team members are viewing or editing a document before you even ask them.
-
- 04** Building new projects is simple. Tell your agent to use `create_file`, and the document appears instantly, ready for your input. You never have to click 'New Document' again.
-
- 05** Keep your data current without opening a single tab. The ability to `update_sheet_data` means you can modify financial models or inventory counts with simple natural language commands.
-

Real-World Applications

The Quarterly Review Prep

A project manager needs to compile data from three different team sheets. Instead of opening each sheet, navigating the tabs, and copying ranges manually, they ask their agent to 'Get spreadsheet data' from all required areas. The agent pulls everything into one structured output for immediate review.

Archiving Old Projects

A coordinator finishes a project and needs to clean up files. Instead of manually checking folders, they ask their agent to 'list files' in the directory, identify outdated materials, and then use `delete_file` on approved items.

Onboarding a New Colleague

A team lead needs to know who has access to the master client contract file before sharing it widely. They ask their agent to 'list collaborators' on the document, instantly providing an accurate list of internal and external users.

Model Maintenance Update

A data analyst finds an old model sheet that needs a few key metrics updated. Rather than opening the file and manually changing cell values, they prompt their agent to 'update sheet data' with the latest figures, ensuring data integrity.

Patterns to Avoid

Copy/pasting data points

X AVOID

Manually opening a spreadsheet, navigating to cell A5, copying the value, switching tabs, and pasting it into a report document.

✓ INSTEAD

Ask your agent to use ``get_sheet_data`` for the required range. It delivers the precise values directly into your chat interface, eliminating all copy/paste steps.

Searching through folders

X AVOID

Opening the main folder view and clicking into subfolders one by one until you locate a specific document.

✓ INSTEAD

Ask the agent to 'list files' or 'list folders'. It gives you an instant, comprehensive overview of your entire structure without any manual clicks.

Missing file context

X AVOID

Trying to remember if a document was created in the main drive or in a specific project subfolder.

✓ INSTEAD

Use ``get_file_info`` when you know the name but not the location. It provides all the necessary metadata, including its path and history.

The Right Fit

You should use this MCP if your workflow requires frequent interaction with structured office data—specifically spreadsheets or document content that must be read, written to, or cataloged. If you find yourself regularly asking a coworker, 'Hey, can you pull the Q2 revenue numbers from the shared sheet?' or 'Can you check who last edited the proposal?', this MCP is for you. Don't use it if your primary need is communication (send messages) or simple web browsing; other specialized tools handle those tasks better. You only need this when document and data *manipulation* is the bottleneck.

The pain of jumping between tabs to build a single report

Right now, assembling a comprehensive status update feels like an archaeological dig. You open Document A, copy three bullet points; switch to Sheet B, manually find the latest metrics in column G, then you have to navigate back to your main presentation file and paste everything into the right spot. This cycle of opening, copying, switching, and pasting is exhausting and slow.

With this MCP, you talk to your agent instead. You just tell it, 'Build out the Q3 status report.' The agent handles finding the necessary files, running `get_sheet_data` for metrics from Sheet B, pulling content using `get_doc_content` from Document A, and compiling everything into a single, actionable response—all in one conversation.

Tencent Docs MCP: Control the flow of your documents

The biggest time sink that vanishes is the manual search. You no longer need to remember if a file was named 'Final' or 'Final v3'; you just ask your agent to `list files` related to 'Project Alpha,' and it gives you everything, plus who has access via `list_collaborators`. The system knows where everything lives.

Your workflow shifts from being reactive—constantly clicking and searching—to proactive. You simply define the desired outcome in plain English, and this MCP executes the multi-step process for you.

Tencent Docs: 10 File & Document Operations Tools

These tools allow your AI agent to perform every file operation possible in Tencent Docs, from creating new files to updating complex spreadsheet data ranges.

#	TOOL	DESCRIPTION
01	<code>create_file</code>	Generates an entirely new document within your Tencent Docs account.
02	<code>delete_file</code>	Permanently removes a specified file from your workspace.
03	<code>get_doc_content</code>	Retrieves the entire written text content of a selected document for you to analyze.
04	<code>get_file_info</code>	Gathers metadata, like creation date and last modified time, about any specific file.
05	<code>get_org_members</code>	Lists all active members associated with your organization account.
06	<code>get_sheet_data</code>	Reads the values from a specified range within any spreadsheet file.
07	<code>list_collaborators</code>	Shows exactly which users have access to and are working on a specific document.
08	<code>list_files</code>	Provides an overview of all files accessible in your primary documents directory.
09	<code>list_folders</code>	Retrieves the names and paths of all folder structures available to you.
10	<code>update_sheet_data</code>	Changes or updates specific values within a spreadsheet range based on your instructions.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U List all my documents on Tencent Docs.

I've retrieved your Tencent Docs files. You have 4 active documents, including 'Q3 Sales Plan' and 'Technical Specs'. Which one would you like to view info for?

U Read the values from 'Inventory!A1:B10' in spreadsheet 'doc-8821'.

I've retrieved the data from the specified range in 'doc-8821'. It contains a list of 10 items with their current stock levels. Would you like me to summarize the low-stock items?

U Create a new document titled 'Project Kickoff Notes'.

Done! I've created the new document 'Project Kickoff Notes' for you. You can now access it and start adding your meeting notes. File ID: TD-9920.

Frequently Asked Questions

01 How do I start using the Tencent Docs MCP?

You first need to subscribe to the MCP on Vinkius and provide your Tencent Docs Access Token. Once connected, any MCP-compatible client can use it.

02 Can I update a spreadsheet with this MCP?

Yes. You use the `update_sheet_data` tool to modify values in existing sheets based on your text prompts. This means you don't have to open the sheet to make changes.

03 What if I need a new document?

You simply ask your agent to 'create a file,' and it uses the `create_file` tool. The new, empty document is instantly available for you to use.

04 Does Tencent Docs MCP help with collaboration tracking?

Yes. You can ask your agent to 'list collaborators' on any file, giving you an instant overview of who has access and involvement in that document.

05 Can I delete files using the Tencent Docs MCP?

You can use the `delete_file` tool. Remember to confirm carefully, as this action is permanent within your workspace.
