Travel Document Readiness Plan MCP

Get your documents ready before you leave.

Travel Document Readiness Plan MCP acts as a planning engine for your travel documentation. It checks your current IDs and papers against specific destination requirements, factoring in expiration dates and necessary lead times. You can generate timelines, checklists, and renewal tasks to ensure you aren't stuck at the airport due to an expired passport or a missing visa.

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Travel Document Readiness Plan MCP

4 tools available

Cloud-hosted on Vinkius

You shouldn't have to guess if your passport is valid enough for your next trip. This MCP handles the math for you. It looks at your destination's specific rules and compares them to your current documents. If a country requires six months of validity and your passport expires in four, your agent will flag it immediately.

Instead of manually checking visa requirements or renewal windows, you can ask your AI client to build a full roadmap. It calculates exactly when you need to apply for new documents and what you need to carry with you on departure day. It covers everything from the high-level timeline of when to renew a passport to the granular details of which physical papers belong in your carry-on versus your checked bag. It turns travel paperwork from a guessing game into a structured plan.

Core Capabilities

01 — Expiration Tracking

Your agent checks your document dates against destination entry rules.

02 — Renewal Scheduling

The AI identifies which documents need new applications and how urgent they are.

03 — Document Checklists

Your agent builds a list of required papers based on your specific trip.

04 — Logistical Planning

The AI organizes where to keep your physical documents on the day you fly.

05 — Timeline Generation

Your agent maps out a schedule of critical dates to ensure readiness.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/travel-document-readiness-plan — connect your AI agent in three steps.

- 01 Connect your preferred MCP-compatible client to Vinkius.
- 02 Provide your travel dates and destination to your AI agent.
- 03 Input your current document details like expiration dates.
- 04 Ask your agent to generate timelines, checklists, or renewal plans.

Connect your AI client to Vinkius to start managing your travel documents.

Built For

This MCP is built for anyone managing complex international travel logistics through an AI agent.

Frequent Travelers

Users who need to track multiple passport and visa expiration dates across several trips.

Travel Coordinators

Professionals who manage documentation requirements for groups or corporate travelers.

Digital Nomads

People moving between countries who need to stay ahead of visa and residency document rules.

What Changes When You Connect

- 01 Prevents travel delays caused by expired documents.
- 02 Automates the calculation of document lead times.
- 03 Organizes physical document custody for travel days.

04 Provides a clear schedule for document renewals.

Real-World Applications

Visa Readiness

Check if your current passport meets the validity window for a specific country before you book a flight.

Renewal Management

Identify which documents need to be renewed months in advance to avoid last-minute rushes.

Departure Day Organization

Get a plan for which documents to keep in your hand and which to pack in your luggage.

Trip Preparation

Generate a complete list of mandatory and recommended documents for a new destination.

Patterns to Avoid

Manual Validity Guessing

❌ AVOID

You check your passport expiration date on a calendar and assume it's fine for a trip to a country with a six-month rule.

✓ INSTEAD

Let your agent compare your specific dates against destination rules using `get_readiness_timeline` to see if you actually meet the entry requirements.

Last Minute Renewal Scrambles

❌ AVOID

You realize your visa expires next week while you are already at the airport.

✓ INSTEAD

Use `get_renewal_actions` to identify which documents need attention months in advance and see exactly how urgent each task is.

Disorganized Departure Day

❌ AVOID

You spend twenty minutes digging through your checked luggage to find your physical boarding pass or passport.

✓ INSTEAD

Run `get_departure_custody_plan` to get a clear plan of which papers stay in your carry-on and which go in your checked bag.

The Right Fit

Connect this MCP if you manage frequent international trips or coordinate travel for others. Do not connect it if you only travel domestically. The decision rests on whether you need to track complex expiration windows and visa requirements across multiple borders.

Travel Document Readiness Plan Tools

These tools handle the math and logistics of document validity, renewal timelines, and physical document management for international travel.

#	TOOL	DESCRIPTION
01	get_departure_custody_plan	This tool builds a logistical plan for your physical documents. It tells you which papers to keep in your carry-on and which to store elsewhere on your travel day.
02	get_document_packet	This tool generates a specific checklist of every document you need for a trip. It uses your destination and requirements to ensure nothing is missed.
03	get_readiness_timeline	This tool creates a chronological roadmap of critical dates. It helps you track when documents must be ready to meet travel deadlines.
04	get_renewal_actions	This tool identifies which of your documents require renewal. It provides specific instructions and assigns an urgency level to each task.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U I am traveling to Japan on 2025-05-20. My passport expires on 2025-06-01. What should I do?

You need to renew your passport immediately. Since your passport expires on 2025-06-01 and your departure is 2025-05-20, it does not meet the required lead time for entry.

U Show me a checklist of documents needed for my trip to France.

Your required documents for France are: Passport (Mandatory), Visa (Conditional), and Travel Insurance (Recommended).

U Create a plan for managing my documents on my flight day.

Your departure-day plan: Keep your Passport in your 'Immediate' access carry-on. Keep your Booking Confirmations in your 'Secondary' access bag.

Frequently Asked Questions

01 How does this MCP help with travel planning?

It evaluates your current documents against the specific requirements of your destination to ensure you are ready to travel.

02 Can I use this with Claude or Cursor?

Yes, you can connect this MCP to any MCP-compatible client including Claude, Cursor, and Windsurf.

03 What happens if my passport expires too soon?

The MCP identifies if your document fails to meet the required lead time for your destination and will flag it as an urgent renewal action.

04 Does it help with physical document organization?

Yes, it includes a tool to create a departure-day custody plan for your physical papers.

05 Do I need to host this myself?

No, Vinkius hosts and manages the MCP for you. You just connect your client and start using the tools.

06 How does the tool calculate renewal urgency?

Urgency is determined by comparing the current date to the 'latest safe renewal date', which is calculated by subtracting the required expiry lead time from your departure date.

07 Can I use this to manage my physical documents on travel day?

Yes, by using ``get_departure_custody_plan``, you receive a logistical plan that categorizes documents by access level (Immediate or Secondary) and suggests storage locations.

08 What happens if a document is missing?

The ``get_document_packet`` tool will identify any required documents that are not present in your inventory and mark them as 'Missing'.

Go Live in 60 Seconds

Get your connection token from cloud.vinkius.com, then paste the endpoint URL into any MCP-compatible client.

YOUR MCP ENDPOINT

`https://edge.vinkius.com/[TOKEN]/mcp`

CLIENT	WHERE TO CONFIGURE
 Claude AI	Profile → Customize → Connectors → "+" → Add custom connector → Paste endpoint
 Cursor	Settings → Features → MCP Servers → "+ Add New MCP Server" → Type: SSE → Paste endpoint
 VS Code	Ctrl/Cmd+Shift+P → "MCP: Add Server" → add <code>"travel-document-readiness-plan": { "url": "..." }</code>
 Windsurf	MCP Settings → <code>mcp_settings.json</code> → Add endpoint URL
 ChatGPT	Settings → Tools & plugins → Add MCP server → Paste endpoint
 Gemini	Extensions → Add MCP Server → Paste endpoint URL
