

MCP SERVER

NO CODE

CLOUD HOSTED

Typeform MCP

Collect Structured Feedback, Effortlessly.

Typeform connects your data collection process directly into your AI client. It lets you build beautifully designed surveys that ask questions one at a time, dramatically boosting completion rates and making it simple to manage, analyze, and retrieve user responses through natural conversation.

automation

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Typeform MCP

8 tools available

Cloud-hosted on Vinkius

Collecting user feedback used to mean jumping between multiple tabs—one for the form, one for the spreadsheet, and another for the analysis. This MCP changes that by connecting your Typeform account directly to your agent. You can use your AI client to manage entire data pipelines without leaving your chat window. Need to know how many leads came in last week? Just ask. Your agent pulls all submissions and lets you filter them by date or status instantly. You can also keep everything organized by checking the details of different workspaces, or even setting up webhooks so that when a form is submitted, your system gets an immediate notification. It's like having full oversight of every survey detail—from listing available design themes to verifying account settings. If you're looking for a centralized hub to connect specialized tools to your AI workflow, Vinkius makes it easy to access this Typeform MCP alongside thousands of others.

It simplifies collecting structured data and turns raw user input into actionable insights.

Core Capabilities

01 — Retrieve all forms in an account

Lists every active survey you own, giving you the IDs needed to pull specific data.

03 — List and filter submitted responses

Pulls all collected answers for any form, letting you narrow down results by date range or completion status.

05 — Monitor submissions in real time

Creates or updates webhooks to send instant alerts every single time a form gets submitted.

02 — Get details for a specific form

Retrieves the full structure of a selected form, showing exactly what questions it asks.

04 — Organize forms using workspaces

Lists your project workspaces so you can keep related groups of surveys separate and tidy.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/mcp/typeform-alternative — connect your AI agent in three steps.

- 01** Subscribe to this MCP and provide your Typeform Personal Access Token, specifying if you're in the US or EU region.
- 02** Your agent authenticates with the Typeform API, giving it access to manage your existing forms, workspaces, and data streams.
- 03** You ask your AI client a question—like 'Show me all lead intakes from last month.'—and the MCP executes the necessary steps using the underlying tools.

The bottom line is you get structured data about user interactions delivered right into your conversation thread.

Built For

This connector is for product managers who are tired of manually exporting spreadsheet reports, and marketing teams who need to track lead generation in real time. It's also great for researchers needing deep dives into user feedback without constant manual API calls.

Product Manager

Analyzes user feedback by asking the agent to list and filter responses, spotting trends that indicate where a feature needs improvement.

Marketing Specialist

Monitors lead generation forms by checking submission counts or setting up webhooks so sales knows immediately when a new qualified lead signs up.

UX Researcher

Retrieves detailed form structures and lists all available workspaces to map out the entire customer journey feedback cycle.

What Changes When You Connect

- 01** Stop manually exporting data. By using the agent to list and filter responses, you get actionable data sets instantly without leaving your chat client.

-
- 02 Keep projects clean by listing workspaces and getting detailed form structures. You always know exactly what questions are being asked for a given project.

 - 03 Never miss a lead again. Set up or update webhooks using the `create_webhook` tool, ensuring your system gets instant alerts when someone submits a critical form.

 - 04 Save time on brand consistency. Check available design themes via `list_design_themes` to ensure all your surveys look professional and unified across every project.

 - 05 Gain full oversight of your account by listing both forms using `list_forms` and workspaces using `list_workspaces`. You see the whole picture, instantly.
-

Real-World Applications

Analyzing Quarterly Customer Feedback

A Product Manager needs to know if customers are happier with the new checkout flow. Instead of downloading 50 different spreadsheets, they ask their agent to list and filter responses for 'Checkout Survey' submissions from the last quarter. The agent summarizes the data points and flags common pain points immediately.

Mapping Out Survey Architecture

A UX Researcher is starting a new study that requires three different forms. They use the agent to list all available workspaces first, then get details on each form they need, ensuring they don't accidentally reuse old question logic.

Automating Sales Lead Alerts

A Marketing Specialist runs a lead intake form that needs immediate follow-up. They use the MCP to create a webhook, routing submissions directly into their CRM system via an instant alert. No more waiting for someone to copy and paste data.

Verifying Form Health

A team needs to ensure that a critical employee survey is still running and configured correctly. They use the agent to list all forms in their workspace and check the webhook status, confirming data flow hasn't broken.

Patterns to Avoid

Treating submissions as static files

X AVOID

Downloading a massive CSV file of responses and then spending hours using Excel formulas to filter by date range or status. This process is slow, error-prone, and lacks context.

✓ INSTEAD

Use the MCP's ability to list responses. You ask your agent for submissions filtered 'since [date]' and with 'status = completed.' The data comes back structured in a single chat response.

Forgetting about organized projects

X AVOID

Having dozens of forms scattered across the account, making it impossible to tell which surveys belong together for a specific product launch.

✓ INSTEAD

Use the agent to list workspaces. This immediately groups related forms into logical containers, giving you an overview before you even look at data.

The Right Fit

You should use this MCP if your primary job involves gathering structured user input—whether it's customer feedback, employee survey results, or sales leads. If you need to know *what* people answered and *when*, this is for you. Don't use it if you are building the forms themselves (that's the Typeform platform). Also, don't rely on it if your data needs complex visual graphing—it delivers structured text and records. For pure content generation or summarizing unstructured documents, look at a document-indexing MCP instead.

The Manual Pain of Data Collection

Right now, gathering feedback is a chore. You build the form in one place; when it fills up, you have to go into another dashboard and manually download the data as a spreadsheet. Then, you copy that raw data into your analysis tool, hoping you didn't miss any rows or dates. It's clicking

With this MCP, your agent handles it all. You ask for responses from a specific form, filtered to only show submissions in the last 30 days, and you get that clean data set delivered straight into your chat thread. The effort of manual filtering evaporates; you just ask.

through tabs, filtering columns by hand, and spending an hour just getting the numbers ready.

Getting Data Structure with Typeform MCP

The most tedious steps go away: the repeated logins, the copy-pasting between tools, and the guesswork about which data set is current. You eliminate the need to manually verify account configurations or check multiple dashboards for status updates.

Now, whether you're checking a specific form's structure using `get_form_details` or listing all forms via `list_forms`, everything is available in one place, controlled by your agent.

Typeform MCP: 8 Tools for Data Collection

Use these tools to list, retrieve, and organize every aspect of your Typeform account, from individual submissions to entire project workspaces.

#	TOOL	DESCRIPTION
01	<code>create_webhook</code>	Sets up or changes an automatic alert that triggers when a specific form is filled out.
02	<code>get_form_details</code>	Pulls the full structure of one survey, detailing every question and its required format.
03	<code>get_workspace_details</code>	Gets information about a specific project workspace, including all related forms.
04	<code>list_forms</code>	Retrieves a list of every form you have created in your account.
05	<code>list_responses</code>	Gathers collected answers for any form, letting you filter by specific dates or completion statuses.
06	<code>list_design_themes</code>	Shows all the available visual templates to keep your surveys branded consistently.
07	<code>list_webhooks</code>	Lists all active webhooks for a specific form, letting you manage your real-time alerts.
08	<code>list_workspaces</code>	Retrieves a list of all organizational workspaces you use to group related forms together.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U List all active forms in my Typeform account.

I've retrieved your forms. You have 5 active surveys including 'Customer Satisfaction 2024', 'Lead Intake Form', and 'Employee Engagement'. Which one would you like to see responses for?

U Show me the last 5 responses for the 'Customer Satisfaction' form.

I've fetched the latest submissions. There are 5 recent responses. Most users seem happy with the new UI, but 2 mentioned issues with the payment step. Shall I retrieve the detailed comments?

U List all forms in the 'Marketing Campaign' workspace (ID: 10293).

Fetching forms... The 'Marketing Campaign' workspace contains 3 forms: 'Newsletter Sign-up', 'Product Interest Quiz', and 'Webinar Registration'. Shall I check the submission count for any of these?

Frequently Asked Questions

01 How do I list active Typeform surveys using the Typeform MCP?

You use the `list_forms` tool. This command pulls a comprehensive list of every form in your account, giving you all the IDs needed for further analysis.

02 Can I get data filtered by date using the Typeform MCP?

Yes. The `list_responses` tool supports filtering submissions by specific dates (using a 'since' parameter) and completion status, giving you precise historical views.

03 What is the best way to get real-time alerts with Typeform MCP?

You manage this using webhooks. You can either list existing webhooks using `list_webhooks` or set up new ones via `create_webhook` for immediate notifications.

04 Does the Typeform MCP help organize my forms by project?

Absolutely. By using the `list_workspaces` tool, you can view your organized collections of forms, keeping all related surveys bundled together by project or team.
