

MCP SERVER

NO CODE

CLOUD HOSTED

WorldNewsAPI MCP

Monitor Global Events and Audit Sources Instantly

WorldNewsAPI searches global news sources and audits articles for any AI agent. Need to track geopolitical shifts or monitor market sentiment? This MCP instantly retrieves real-time news, pulls top stories by country, and extracts deep content metadata from specific links without you ever visiting a news website. It's your full media research toolkit built right into your workflow.

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

WorldNewsAPI MCP

4 tools available

Cloud-hosted on Vinkius

This connection lets your AI agent handle complex global journalism tasks through natural conversation. Instead of spending hours opening dozen different tabs to manually gather data, your agent pulls together verified intelligence from around the world. You can ask it to search for news articles based on a simple keyword or phrase, getting a clear view of how many major outlets are talking about a topic right now. It'll also audit top stories across specific countries and languages, so you know who's leading the information flow in any region. If you get a link to a story, your agent can extract all the high-resolution content and metadata needed for deep classification. When you connect WorldNewsAPI via Vinkius, your AI client acts like a real-time news analyst, making sure your intelligence is always precise and ready for immediate use.

Core Capabilities

01 — Search by keywords

Find thousands of recent articles across global media using specific phrases or topics.

02 — Audit top headlines

Check the most prominent stories and current leads for any country and language combination.

03 — Extract content from URLs

Pull all the raw article text and metadata directly from a specific news link.

04 — Check service status

Verify that the WorldNews API connection is running and operational before starting research.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/mcp/worldnewsapi — connect your AI agent in three steps.

- 01 Subscribe to this MCP, then enter your unique WorldNewsAPI key.
- 02 Connect it in your preferred AI client (like Claude or Cursor).
- 03 Your agent can then call the tools—for example, asking it to 'search for news about energy regulations'—and receive structured data.

The bottom line is you get automated access to global journalism intelligence right inside your chat window.

Built For

This MCP is essential for media analysts, market researchers, and policy leads who deal with information volume. If your job requires monitoring regional shifts or verifying industry claims based on the news cycle, this saves you massive amounts of time.

Market Researcher

Verifies if industry rumors are picking up in international media by running targeted searches and auditing patterns.

Journalist / Media Analyst

Tracks global trends, gathering official metadata and comparing top stories across different countries instantly for a story pitch.

Policy Lead

Performs rapid audits of regional geopolitical stories to identify key markers that inform policy decisions without manual deep dives.

What Changes When You Connect

- 01 Go beyond simple searches. Use the `search_world_news` tool to find articles by specific keywords, giving you a clear picture of how widely a topic is covered globally.

-
- 02 Understand regional influence with `get_top_world_news`. You can audit the top stories for any country and language, letting you pinpoint current information leaders instantly.

 - 03 Deep-dive into sources using `extract_news_from_url`. Instead of copying chunks of text, this tool pulls all content and metadata directly from a single news link.

 - 04 Verify your process before you start by running `check_api_status`. This makes sure your media research workflow is always operational when deadlines loom.

 - 05 Keep track of complex stories by grouping tools. For example, `search_world_news` can pull leads that you then feed into `extract_news_from_url` for deep context.
-

Real-World Applications

Tracking a sudden market shift

A market researcher needs to know if a new trade tariff is gaining traction in Asia. They ask their agent to run the `search_world_news` tool for 'trade tariffs' and then use `get_top_world_news` for Japan/Japanese to see which local outlets are leading the discussion.

Preparing for an international pitch

A journalist needs context on current events in Brazil. They use `get_top_world_news` to grab headlines, then ask their agent to `search_world_news` using a specific theme to build out background material.

Verifying geopolitical buzz

A policy lead needs confirmation on a regional conflict. They use `search_world_news` first, followed by `extract_news_from_url` on three different articles to compare the source metadata and see which narrative is most dominant.

Automating competitive intelligence

A competitor analyst needs to know what rivals are saying about AI ethics. They use the `search_world_news` tool with multiple industry keywords and then `check_api_status` first to ensure reliable data flow for their team.

Patterns to Avoid

Searching manually across Google News

X AVOID

Logging into five different news sites, running keyword searches on each one individually, and copy-pasting snippets into a spreadsheet.

✓ INSTEAD

Just tell your agent to use `search_world_news` with the keywords. It collects the data from all sources in one go.

Relying only on headlines

X AVOID

Getting top stories via `get_top_world_news`, but realizing you need the actual context to write a report.

✓ INSTEAD

After getting the headline list, pass one of those URLs back into `extract_news_from_url` so your agent gets the full article text.

Assuming data access

X AVOID

Starting a massive research project without confirming if the connection is active or reliable.

✓ INSTEAD

Always run `check_api_status` first. It confirms the WorldNews service is operational, so you don't waste time on failed queries.

The Right Fit

Use this MCP if your job requires synthesizing information from disparate global media sources. If you need to compare how different countries are reporting on the same event, or if you need verifiable metadata alongside article text, this is your tool. Don't use it if all you need is a quick definition or basic factual look-up; for that, a general knowledge search engine works fine. You should also avoid using it if your research needs to focus only on proprietary internal company documents—this MCP is strictly for public global news data. If you are building an agent workflow focused purely on content retrieval from known URLs, this MCP provides the necessary tools like `extract_news_from_url`.

The Pain of Manual Media Auditing

Today, tracking global news is a nightmare. You're bouncing between Google News, Reuters, BBC, and local outlets. You copy headlines into one sheet, then open the link, copy the article summary, paste it somewhere else, and repeat this process dozens of times just to build a basic picture of public sentiment.

With WorldNewsAPI, your agent handles the whole mess. Tell it what you're looking for, and it doesn't just give you links; it executes `search_world_news` and gathers structured intelligence from multiple sources automatically. You get immediate, categorized data ready to write with.

Getting Full Context with WorldNewsAPI

Manual workflows force you to treat every article as a separate entity. You spend time opening the link, scrolling down, and trying to copy enough text to give your team context—a huge waste of hours.

Now, after identifying key stories with `get_top_world_news`, you can pass those URLs to `extract_news_from_url`. This pulls everything, including publication date and author metadata, giving you the deep background needed in one shot.

WorldNewsAPI: 4 Tools for Global Intelligence

These four tools let you check service status, find top headlines by country, search specific topics across the web, and extract full content from any news link.

| # | TOOL | DESCRIPTION |
|----|------------------------------------|--|
| 01 | <code>check_api_status</code> | Confirms whether the WorldNews service is currently online and ready for use. |
| 02 | <code>extract_news_from_url</code> | Pulls all the article text and metadata from a specific news URL you provide. |
| 03 | <code>get_top_world_news</code> | Fetches the current top headlines for any specified country and language combination. |
| 04 | <code>search_world_news</code> | Searches across multiple global sources to find articles matching a keyword or phrase. |

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U Search for news about 'artificial intelligence' using WorldNewsAPI.

I've retrieved several articles about artificial intelligence! Notable headlines include updates on new model releases and industry regulations. Would you like the full text or the source metadata for any of these stories?

U Show the top stories in 'United Kingdom' in 'English'.

I've identified the top stories for the UK in English! They cover current events from major British publishers. I can provide the summary and direct links for each of these articles if you'd like.

U Extract the news content from 'https://www.bbc.com/news/example-article'.

I've retrieved the article content! The text covers [Summary]. I can also assist you with the publication date and author metadata for this specific link.

Frequently Asked Questions

01 Can WorldNewsAPI find news from private sources?

No. WorldNewsAPI is designed to audit public global journalism. It pulls content and metadata only from major, publicly available news websites.

02 How do I use search_world_news with multiple keywords?

You can prompt your agent to run the tool several times or group related phrases into a single request. This lets you compare how different topics are being covered simultaneously.

03 Do I need an API key for WorldNewsAPI MCP?

Yes, you must subscribe and enter your unique WorldNewsAPI Key in the Vinkius marketplace to authorize access to the service's tools.

04 What is the difference between search_world_news and get_top_world_news?

get_top_world_news gives you the most popular, current headlines for a region. search_world_news lets you hunt specifically for articles matching your own defined topic or phrase.

05 Is WorldNewsAPI good for technical jargon?

Yes. By pulling content and metadata from URLs using extract_news_from_url, it captures the full depth of reporting, including specialized industry terminology.
